

Fig. 40 Exploded view of the fuel filter—4.2L engine

Fig. 41 Fuel filter/water separator—4.2L engine

Fig. 42 Exploded view of the fuel filter—4.2L engine

To Install:

1. Clean the mating surfaces on the header assembly and the filter. Align the widest key slot in the venting cap with that in the header assembly, push the venting cap down until the two surfaces make contact. Then tighten the nut to tight.
2. Open the air bleed valve on top of the filter assembly. Connect a hose to the header valve and insert the other end into a suitable glass container.
3. Disconnect the fuel injection pump shut-down solenoid wire at the FUEL SOL. relay center line terminals apart from your vehicle, then cranks the engine in 10-15 second intervals until clear, clean fuel is coming out of the hose.

Wait about one minute between cranking intervals:

4. Remove the hose and close the header valve.
5. Connect the shut-down solenoid wire at FUEL SOL and install the fuel cap. Start the engine and allow it to idle for a few minutes. Check for leaks.

PCV Valve

See Figures 43

Check engine oil level without a PCV system:

The PCV valve, which is the heart of the positive crankcase ventilation system, should be changed as noted in the Maintenance intervals chart at the end of this section. The most thing to keep in mind is that the valve should be free of dirt and residue and should be in working order. As long as the valve is not showing signs of becoming damaged or gummed up, it should perform its function properly. When the valve becomes sticky and will not operate freely, it should be replaced.

The PCV valve is used to control the rate at which crankcase vapors are returned to the intake manifold. The action of the valve plunger is controlled by intake manifold vacuum and the spring. During deceleration and idle, when manifold vacuum is high, it overcomes the tension of the valve spring and the plunger bottoms in the manifold end of the valve housing. Because of the valve construction, it restricts, but does not stop, the passage of vapors to the intake manifold. When the engine is lightly accelerated or operated at constant speed, spring tension matches intake manifold vacuum pull and the plunger stays in mid position in the valve body, allowing most vapors to flow into the manifold.

The valve is either mounted on the valve cover or in the line which runs from the intake manifold to the crankcase. Do not attempt to adjust or repair the valve. If the valve is faulty, replace it.

Fig. 43 PCV valve location—gasoline engine

REMOVAL & INSTALLATION:

See Figures 44 and 45

1. Remove the PCV valve from the cylinder head cover or from the intake manifold.
2. Visually inspect all hose connections and hoses for cracks, leaks or deterioration and replace as necessary.
