Anglo Saxon Farms And Farming Medieval History And Archaeology:

Anglo-Saxon Farms and Farming Debby Banham, Rosamond Faith, 2014 Farming was the basis of the wealth that made England worth invading twice in the eleventh century while trade and manufacturing were insignificant by modern standards In *Anglo Saxon Farms and Farming* the authors employ a wide range of evidence to investigate how Anglo Saxon farmers produced the food and other agricultural products that sustained English economy society and culture before the Norman Conquest The first part of the volume draws on written and pictorial sources archaeology place names and the history of the English language to discover what crops and livestock people raised and what tools and techniques were used to produce them In part two using a series of landscape studies place names maps and the landscape itself the authors explore how these techniques might have been combined into working agricultural regimes in different parts of the country A picture emerges of an agriculture that changed from an essentially prehistoric state in the sub Roman period to what was recognisably the beginning of a tradition that only ended with the Second World War Anglo Saxon farming was not only sustainable but infinitely adaptable to different soils and geology and to a climate changing as unpredictably as it is today

Farming Transformed in Anglo-Saxon England Mark McKerracher, 2018-02-21 Anglo Saxon farming has traditionally been seen as the wellspring of English agriculture setting the pattern for 1000 years to come but it was more important than that A rich harvest of archaeological data is now revealing the untold story of agricultural innovation the beginnings of a revolution in the age of Bede Armed with a powerful new dataset *Farming Transformed* explores fundamental questions about the minutiae of early medieval farming and its wider relevance How old were sheep left to grow for example and what pathologies did cattle sustain What does wheat chaff have to do with lordship and the market economy What connects ovens in Roman Germany with barley maltings in early medieval Northamptonshire And just how interested were Saxon nuns in cultivating the opium poppy *Farming Transformed* is the first book to draw together the variegated evidence of pollen sediments charred seeds animal bones watermills corn drying ovens granaries and stockyards on an extensive regional scale The result is an inter disciplinary dataset of unprecedented scope and size which reveals how cereal cultivation boomed and new watermills granaries and ovens were erected to cope with and flaunt the fat of the land As arable farming grew at the expense of pasture sheep and cattle came under closer management and lived longer lives yielding more wool dairy goods and traction power for plowing These and other innovations are found to be concentrated at royal aristocratic and monastic centers placing lordship at the forefront of agricultural innovation and farming as the force behind kingdom formation and economic resurgence in the seventh and eighth centuries

Farmers, Monks and Aristocrats K. M. Dobney, D. Jaques, James Barrett, Cluny Johnstone, 2007-12-12 The environmental archaeological evidence from the site of Flixborough in particular the animal bone assemblage provides a series of unique insights into Anglo Saxon life in England during the 8th to 10th centuries The research reveals detailed evidence for the local and regional environment many aspects of the local and regional agricultural economy changing resource exploitation strategies and the extent of possible trade and exchange networks Perhaps the most important conclusions have been gleaned from the synthesis of these various lines of evidence viewed in a broader archaeological context Thus bioarchaeological data from Flixborough have documented for the first time in a detailed and systematic way the significant shift in social and economic aspects of wider Anglo Saxon life during the 9th century AD and comment on the possible role of external factors such as the arrival of Scandinavians in the life and development of the settlement The bioarchaeological evidence from Flixborough is also used to explore the tentative evidence revealed by more traditional archaeological materials for the presence during the 9th century of elements of monastic life The vast majority of bioarchaeological evidence from Flixborough provides both direct and indirect evidence of the wealth and social standing of some of the inhabitants as well as a plethora of unique information about agricultural and provisioning practices associated with a major Anglo Saxon estate centre The environmental archaeological record from Flixborough is without doubt one of the most important datasets of the early medieval period and one which will provide a key benchmark for future research into many aspects of early medieval archaeology

Prehistoric Burial Mounds in Orton Meadows, Peterborough Donald Mackreth, 2021 Construction of the Peterborough Eastern Bypass led to the excavation of a burial mound and the discovery of a complex burial and ritual site which lay in the Nene valley on the north bank of an old course of the river The site was effectively sealed under alluvial deposits accumulating over the last thousand years and almost untouched by any post medieval disturbance A round barrow found by David Hall in the 1970s was a slight bump in the flood meadows scarcely 0.25m above the general level When archaeological excavation began a change in the vegetation nearby proved to be another older burial monument Work was intermittent held up by lack of funds and only completed under a government unemployment scheme Both burial sites span the period from the Neolithic to the Middle Bronze Age with evidence that they shared a sequence of development Iron Age weaponry and currency bars were recovered from the old course of the river Nene and there was evidence that ritual or religious practice continued at the barrow into Early Saxon times The focus of the cult may have been the tidal effect on the Nene Cultivation in open fields up stream during the Late Saxon and Medieval periods led to silting of the valley bottom almost completely covering the burial mounds the process coming to an end progressively through the eighteenth century

Coinage in the Northumbrian Landscape and Economy, C.575-c.867 Tony Abramson, 2018 This book presents the author's digitization of Pirie's corpus of 9th century Northumbrian styca This database enhanced by data from elsewhere is compared by location with the artefactual database known as VASLE created at the University of York 2008 to demonstrate that the co-occurrence of coins and portable artefacts defines monetary evolution in Northumbria Additionally the author presents a new periodization and reveals the previously disparaged gold shillings of York to have been issued by Bishop Paulinus a disruptive finding chronologically with wider consequences Northumbria benefited increasingly both monetarily and fiscally as the face value of coins fell Other conclusions include the idea that Northumbrian coin production was erratic that the Yorkshire Wolds were more highly monetized than the surrounding lowlands indicating a more enterprising culture that styca hoards represent episcopal expropriations and that there were significant changes in settlement and economy in the central lowlands This work demonstrates that monetization reflected northern independence innovation and enterprise
