manage genetic resources allowing us to make efficient and sustainable decisions for the improvement or breeding of these resources This book had an ambitious goal in bringing together a sample of the world s leading scientists in animal breeding and evolutionary genetics to exchange knowledge to advance our understanding of these vital issues *Nomadic and Indigenous Spaces* Judith Miggelbrink,Joachim Otto Habeck,Nuccio Mazzullo,Peter Koch,2016-05-06 This volume is devoted to aspects of space that have thus far been largely unexplored How space is perceived and cognised has been discussed from different stances but there are few analyses of nomadic approaches to spatiality Nor is there a sufficient number of studies on indigenous interpretations of space despite the importance of territory and place in definitions of indigeneity At the intersection of geography and anthropology the authors of this volume combine general reflections on spatiality with case studies from the Circumpolar North and other nomadic settings Spatial perceptions and practices have been profoundly transformed by new technologies as well as by new modes of social and political interaction How do these changes play out in the everyday lives identifications and political projects of nomadic and indigenous people This question has been broached from two seemingly divergent stances spatial cognition on the one hand and production of space on the other Bringing these two approaches together this volume re aligns the different strings of scholarship on spatiality making them applicable and relevant for indigenous and nomadic conceptualizations of space place and territory *American and Australasian Marsupials* Nilton C. Cáceres,Christopher R. Dickman,2023-06-30 This book focuses on the evolution biogeography systematics taxonomy and ecology of New World and Australasian marsupials greatly expanding the current knowledge base There are roughly 140 species of New World marsupials of which the opossum is the best known Thanks to recent research there is now an increasing amount of understanding about their evolution biogeography systematics ecology and conservation in the Americas especially in South America There are also some 270 marsupial species in the Australasian region many of which have been subject to research only in recent years Based on this information and the authors extensive research this book provides comprehensive insights into the world s marsupials It will appeal to academics and specialized researchers students of zoology paleontology evolutionary biology ecology physiology and conservation as well as interested non experts
