Chinese Language Resources Chu-Ren Huang, Shu-Kai Hsieh, Peng Jin, 2023-12-18 Based on the accumulation of research experience and knowledge over the past 30 years, this volume lays out the research issues posed by the construction of various types of Chinese language resources, how they were resolved, and the implication of the solutions for future Chinese language processing research. This volume covers 30 years of development in Chinese language processing, focusing on the impact of conscientious decisions by some leading research groups. It focuses on constructing language resources which led to thriving research and development of expertise in Chinese language technology today. Contributions from more than 40 leading scholars from various countries explore how Chinese language resources are used in current pioneering NLP research, the future challenges, and their implications for computational and theoretical linguistics.

Déjà Vu Dr. Chris Inyang, 2024-09-29 The book describes the phenomenon of corruption that befalls administration after administration in Nigeria, and its citizens are the causes. The book describes fixing the problems that requires citizens' commitment because no other country or a person can solve them except Nigerians. This book illustrates the drawbacks of corruption and provides a method to use and keep it under control. This book describes how political parties and politicians offer empty promises during the election campaigns to win citizens' votes, and after the election is over, they cease to fulfill their obligations. The book illustrates how states, local and federal governments are mismanaging citizens' funds. The book illustrates how some of the opportunists in the government agencies or private sectors acquired properties in Nigeria and overseas with the funds they had stolen, and some of them took those funds and deposited in their foreign bank accounts to prevent any shred of evidence by the appropriate law enforcement agencies in charge of monetary or illegal dealings. The book depicts the leaders from the inception of the country up to the last administration that aided the country, either progress or oscillating during their tenure in office. In this book, it describes how corruption became institutionalized in all facets of government agencies, private sectors, individuals, including secondary and primary schools, universities, churches, mosques, and marketplaces.

Emergent neural computation from the interaction of different forms of plasticity Cristina Savin, Matthieu Gilson, Friedemann Zenke, 2016-03-22 From the propagation of neural activity through synapses to the integration of signals in the dendritic arbor and the processes determining action potential generation, virtually all aspects of neural processing are plastic. This plasticity underlies the remarkable versatility and robustness of

cortical circuits it enables the brain to learn regularities in its sensory inputs to remember the past and to recover function after injury While much of the research into learning and memory has focused on forms of Hebbian plasticity at excitatory synapses LTD LTP STDP several other plasticity mechanisms have been characterized experimentally including the plasticity of inhibitory circuits Kullmann 2012 synaptic scaling Turrigiano 2011 and intrinsic plasticity Zhang and Linden 2003 However our current understanding of the computational roles of these plasticity mechanisms remains rudimentary at best While traditionally they are assumed to serve a homeostatic purpose counterbalancing the destabilizing effects of Hebbian learning recent work suggests that they can have a profound impact on circuit function Savin 2010 Vogels 2011 Keck 2012 Hence theoretical investigation into the functional implications of these mechanisms may shed new light on the computational principles at work in neural circuits This Research Topic of Frontiers in Computational Neuroscience aims to bring together recent advances in theoretical modeling of different plasticity mechanisms and of their contributions to circuit function Topics of interest include the computational roles of plasticity of inhibitory circuitry metaplasticity synaptic scaling intrinsic plasticity plasticity within the dendritic arbor and in particular studies on the interplay between homeostatic and Hebbian plasticity and their joint contribution to network function [International Labour Documentation](#) ,1965 *Thales of Miletus* Patricia F. O'Grady,2017-03-02 What is the basic building block of the universe Thales of Miletus was the first to ask this fundamental yet to be answered question in the sixth century B C This book offers an in depth account of the answers he gave and of his adventure into many areas of learning philosophy science mathematics and astronomy Thales proved that the events of nature were comprehensible to man and could be explained without the intervention of mythological beings Henceforth they became subject to investigation experiment questioning and discussion Presenting for the first time in the English language a comprehensive study of Thales of Miletus Patricia O Grady brings Thales out of pre Socratic shadows into historical illumination and explores why this historical figure has proved to be of lasting significance

Neuromodulation of Executive Circuits M. Victoria Puig,Allan T. Gullledge,Evelyn K. Lambe,Guillermo Gonzalez-Burgos,2016-01-21 High order executive tasks involve the interplay between frontal cortex and other cortical and subcortical brain regions In particular the frontal cortex striatum and thalamus interact via parallel fronto striatal loops that

are crucial for the executive control of behavior. In all of these brain regions, neuromodulatory inputs (e.g., serotonergic, dopaminergic, cholinergic, adrenergic, and peptidergic) regulate neuronal activity and synaptic transmission to optimize circuit performance for specific cognitive demands. Indeed, dysregulation of neuromodulatory input to fronto-striatal circuits is implicated in a number of neuropsychiatric disorders such as schizophrenia, depression, and Parkinson's disease. However, despite decades of intense investigation, how neuromodulators influence the activity of fronto-striatal circuits to generate the precise activity patterns required for sophisticated cognitive tasks remains unknown. In part, this reflects the complexity of the cellular microcircuits in these brain regions (i.e., heterogeneity of neuron subtypes and connectivity, cell type-specific expression patterns for the numerous receptor subtypes mediating neuromodulatory signals, and the potential interaction of multiple signaling cascades in individual neurons). This Research Topic includes 10 original research articles and seven review articles addressing the role of neuromodulation in executive function at multiple levels of analysis, ranging from the activity of single voltage-dependent ion channels to computational models of network interactions in cortex, striatum, thalamus, and systems.
