Johnstone Triangle Norman Reid, 2021-01-18 Chemistry is often seen as a difficult subject to understand This book focusses on the triangle model that Alex H Johnstone developed in the early 1980s Originally conceived in the context of making chemistry more accessible to a wider range of learners the model has been applied in almost every area of education in chemistry at all stages of learning In looking at why chemistry is difficult there are two central questions Firstly does the problem relate to the nature of chemistry and secondly does it relate to the way humans gain understanding Both were found to be important and the answers to the two questions were found to be connected The triangle model arose from sustained research into human learning The central finding from research is the critical role of working memory and the model rationalises so much evidence from chemistry education research as well as the repeated experiences of teachers of chemistry at all levels In order to understand chemistry it is essential to develop sound mental models of molecular reality It generates major implications for the way a chemistry curriculum should be constructed and the processes of teaching and learning in chemistry when the goal is focussed on understanding the key ideas Some of these implications are developed and pointers offered to more successful ways forward The power of the Johnstone Triangle lies in the way it offers clear directions for all involved in chemistry education It is hoped that this book will prove helpful to all involved in sharing the exciting story of the way humans have come to understand the molecular world one of the great examples of great human endeavour

Advances in Research on Potato Production Shashank Shekhar Solankey, 2025-06-11 Potato *Solanum tuberosum* L is the world's third most important food crop and the fourth most important food crop in India Potatoes are nutritionally rich fat free gluten free and high in dietary fibre They are also a good source of vitamin C vitamin B6 phenols iron potassium phosphorus magnesium and protein as compared to cereals They are more energy packed than any other popular vegetables and have the ability to combat hidden hunger which is a major global health issue The potato is also considered the king of vegetables due to its versatile uses and is an important staple food worldwide According to the FAOSTAT database 2023 global potato production in 2022 was 375 million tonnes with the top producers being China 95.5 million tonnes and India 56 million tonnes The United Nations declared 2008 the International Year of the Potato IYP to increase awareness of the relationship that exists between poverty food security malnutrition and the potential contribution of the potato in defeating hunger Moreover this magical crop can generate a higher yield compared to the other crops hence it is one of the most notable crops to eliminate hunger and poverty Therefore sustainable potato production is important for food security and social welfare in future climate change scenarios It is important to inform that potatoes have a shallow root system and are highly sensitive to environmental conditions and climate change It is projected that potato yield may decrease up to 32 per cent by 2050 due to increasing temperatures and drought conditions Thus future potato breeding programmes should focus on enhancing abiotic and biotic stress tolerance through the utilization of the natural germplasm conserved in different gene banks along with climate friendly agronomical practices Moreover potato breeding should benefit from the

effectiveness and ease of molecular techniques such as marker assisted selection genome wide association studies functional genomics and transgenics The development of new potato varieties can also be achieved via genetic engineering and genome editing Disease free potato seed production requires the integration of tissue culture methods followed by the production of mini tubers under an aeroponic system As it is a staple food for millions and demand for potatoes will increase in the future which makes this crop suitable for future research Hence the present book is formulated for professionals researchers and post graduate students who is working with advanced production breeding and post harvest technologies on potato crop specially in Indian perspective
