2014 Physical Science Grade 11:

Science Education and Curriculum in South Africa Oscar Koopman, 2016-11-01 This book explores the impact of the socio historical political and economic environment in South Africa both during and after Apartheid During this time the South African education system demonstrated an interest in a specific type of knowledge which Koopman refers to as a science of government This science of government leaves the learners with a blurred understanding of science that is disconnected from external nature and human nature and is presented as a series of abstract concepts and definitions The book also investigates the dialectical tensions between the science curriculum and the role of the teacher as an active implementer of the curriculum The book draws on the work of various phenomenological scholars namely Edmund Husserl Martin Heidegger Merleau Ponty and Max van Manen to discuss these tensions

Science Education in Canada Christine D. Tippet, Todd M. Milford, 2019-07-01 This book offers a meso level description of demographics science education and science teacher education Representing all 13 Canadian jurisdictions the book provides local insights that serve as the basis for exploring the Canadian system as a whole and function as a common starting point from which to identify causal relationships that may be associated with Canada's successes The book highlights commonalities consistencies and distinctions across the provinces and territories in a thematic analysis of the 13 jurisdiction specific chapters Although the analysis indicates a network of policy and practice issues warranting further consideration the diverse nature of Canadian science education makes simple identification of causal relationships elusive Canada has a reputation for strong science achievement However there is currently limited literature on science education in Canada at the general level or in specific areas such as Canadian science curriculum or science teacher education This book fills that gap by presenting a thorough description of science education at the provincial territorial level as well as a more holistic description of pressing issues for Canadian science education

Schooling for Sustainable Development in Africa Heila Lotz-Sisitka, Overson Shumba, Justin Lupele, Di Wilmot, 2016-11-11 This book considers the scope and dynamics of Education for Sustainable Development ESD and learning in schools in Africa It explores the conditions and processes that support such learning and examines how ESD in schooling can improve the quality and relevance of education The quality of education has been defined internationally as a key concern for educational institutions around the world including schools in Africa The models of quality are often limited to performance based approaches and or inclusive approaches The contributions in this book show that there is more to a discussion on educational quality in Africa than performance success and or inclusion The chapters explain how ESD brings a new relevance to education in Africa and at the same time sounds the beginning of a new concept of quality education The volume presents a collection of experiences in creating and supporting quality learning processes through a variety of ESD practices
