Abstract—The ambitious nature of the present digital era demands the IT industries to increase their return on investment and achieve better results. With this in mind, technologies have been developed and put into use. One such emerging technology that is making a big impact is cloud computing. Being on cloud is a benefactor to businesses and IT sector to save resources, time, investment and maintenance cost. This has led to adoption of cloud services by most of the organizations and the demand for cloud computing technology has observed steep increase with time. As a result, due to greater usage of cloud services there has been an increase in workload leading to an unequal grouping of work load among servers resulting in server being overloaded, affecting its performance. The challenge now is to assure Quality of Service (QoS) to customers by equal distribution of workload among

Perks of using cloud computing

- Easy Integration – As customer demand increases, service provider can scale up the resources such as data storage, the number of servers.
- Saves money – Customers need not pay for the set-up of their infrastructure as it hosted by the provider. No license renewal issues as it is all managed by the provider.
- Ease of access – Service can be accessed by the user from any part of the world with an internet connection.
- Pay as per usage policy – Customers can pay for what
