Military Neuroscience and the Coming Age of Neurowarfare Armin Krishnan, 2016-10-04 Krishnan describes military applications of neuroscience research and emerging neurotechnology with relevance to the conduct of armed conflict and law enforcement This work builds upon literature by scholars such as Moreno and Giordano and fills an existing gap not only in terms of reviewing available and future neurotechnologies and relevant applications but by discussing how the military pursuit of these technologies fits into the overall strategic context The first to sketch future neurowarfare by looking at its potentials as well as its inherent limitations this book's main theme is how military neuroscience will enhance and possibly transform both classical psychological operations and cyber warfare Its core argument is that nonlethal strategies and tactics could become central to warfare in the first half of the twenty first century This creates both humanitarian opportunities in making war less bloody and

burdensome as well as some unprecedented threats and dangers in terms of preserving freedom of thought and will in a coming age where minds can be manipulated with great precision

Corporate and Trust Structures David Chaikin, Gordon Hook, 2018-04-05 Corporate and Trust Structures Legal and Illegal Dimensions is a collection of essays by experts in company law trusts and financial crime It explores the nature of companies and trusts how they have been utilised for legitimate business purposes and how they can be exploited by criminals for illegal purposes Basic concepts relating to trusts and companies are considered together with recent developments in corporate liability including when liability may be attributed to companies and when the veil of limited liability may be lifted Complex corporate structures including the ownership structure of the Alibaba Group are examined The Panama Papers revelations are also discussed together with the mechanisms within trusts and company structures that make them vulnerable and attractive for criminal abuse The essayists address critical issues in the domestic and international contexts including the requirements of the international standards against money laundering relevant to trusts and companies Academics lawyers business people and policy makers will find the essays topical and relevant

Legume Nitrogen Fixation in Soils with Low Phosphorus Availability Saad Sulieman, Lam-Son Phan Tran, 2017-06-10 This thoughtful and provocative book provides a concise up to date presentation of how current and projected future phosphorus scarcity will affect legume growth and their symbiotic nitrogen fixing capabilities It is a timely examination of the physiological and molecular responses of nodules to phosphorous deficiency in attempt to identify common principles Students and researchers in the many disciplines related to crop productivity will find this title an exciting contribution in the area of plant stress physiology The knowledge in this volume can also aid plant breeders particularly through new methods of genetic engineering in developing unique and adaptive cultivars with higher symbiotic efficiency The awareness of the rapidly rising world population must translate into a parallel increase in agricultural production in order to sustain the growing population both now and in the future Hence the demand for food crops to produce proteins and vegetable oil for human consumption is going to increase considerably during the coming years The essential role of legumes in agriculture is well recognized given the abundant levels of proteins and oils found in plants along with their enormous contribution to the sustainability of agricultural systems and human health The capacity of legumes to fix nitrogen N_2 in partnership with rhizobia provides an input saving and resource conserving alternative thereby reducing the need for chemical fertilizers while enhancing overall crop productivity The use of N_2 fixing legumes to produce plant proteins results in a substantial decrease in the consumption of fossil fuels and therefore also in the agricultural effects to global warming However a major constraint to legume production is low soil phosphorus P availability considering that an overwhelming majority of the world's soils are classified as P deficient Low P availability is especially problematic for legumes since legume nodules responsible for N_2 fixation have a high P requirement Therefore this book explains how nodule N_2 fixation responds to low P availability which is crucial for improving legume production and maintaining
