Algebra William G. McCallum, Eric Connally, Deborah Hughes-Hallett, 2014-11-25 Algebra Form and Function was designed based on the fundamental goal for a student to foster understanding of algebraic structure that is an understanding of how the arrangements of symbols allows us to predict for example the behavior of a function or the number of solutions to an equation Mastering algebraic structure enables students to read algebraic expressions and equations in real life contexts not just manipulate them and to choose which form or which operation will best suit the context It facilitates being able to translate back and forth between symbolic graphical numerical and verbal representations By balancing practice in manipulation and opportunities to see the big picture Algebra Form and Function offers a way for teachers to help students achieve real mastery of algebra **Annual Catalog - United States Air Force Academy** United States Air Force Academy, 1971 *United States Air Force Academy* United States Air Force Academy, **I Love HandsOn Math**

Supporting Students' Understanding of Algebra Susan Denise Nickerson, 2001 This dissertation involved an 8 week investigation in a high school classroom to explore how students' prior experiences with dynamic graphs of linear equations supported their efforts to understand systems of linear equations. The researcher and the classroom teacher developed two technology-intensive instructional sequences that were taught by the classroom teacher. The daily collaborative meetings of the researcher and the teacher informed revisions to the instructional sequence. This study used the situated perspective to analyze the collective mathematical development of the class and to compare the ways in which individuals participated in the collective development. According to theorists of the situated perspective, knowing mathematics is considered an aspect of participation in social practices. In order to describe the collective development, the construct of a practice was used to examine the structure, responsibilities, and common activities of the mathematics classroom. I describe four target students' individual growth in terms of a trajectory of participation in the practices of mathematical thinking. Our conjectures about the means of supporting student learning in the form of curriculum and software were empirically tested. By providing insight into the process by which a group of students collectively develop understandings of important mathematical ideas, analyses such as this can help teachers and instructional designers anticipate possible ways other groups of students will develop meaning. This work also informs classroom teachers in that situated research such as this embraces the complexity of the classroom. It accounts for what students contribute and what teachers can do to support student learning. This analysis is not prescriptive in the sense of theory informing educational practice. Instead, in this theoretical framework, a reflexive relationship exists between theory and practice. Teachers can see how ideas emerged and student conceptions developed within a particular context.

Problem Posing and Problem Solving in Mathematics Education Tin Lam Toh, Manuel Santos-Trigo, Puay Huat Chua, Nor Azura Abdullah, Dan Zhang, 2024-01-01 This book presents both theoretical and empirical contributions from a global perspective on problem solving and posing (PS/PP) and their application in relation to the teaching and learning of mathematics in schools. The chapters are derived from selected presentations in the PS/PP Topical Study Group in ICME14. Although mathematical problem posing is a much younger field of inquiry in mathematics education, this topic has grown rapidly. The mathematics curriculum frameworks in many parts of the world have incorporated problem posing as an instructional focus, building on problem solving as its foundation. The juxtaposition of problem solving and problem posing in mathematics presented in this book addresses the needs of the mathematics education research and practice communities at the present day. In particular, this book aims to address the three key points to present an overview of research and development regarding students' mathematical problem solving and posing, to discuss new trends and developments in research and practice on these topics, and to provide insight into the future trends of mathematical problem
