Fault Diagnosis and Fault-Tolerant Control and Guidance for Aerospace Vehicles Ali Zolghadri, David Henry, Jérôme Cieslak, Denis Efimov, Philippe Goupil, 2013-10-07 Fault Diagnosis and Fault-Tolerant Control and Guidance for Aerospace demonstrates the attractive potential of recent developments in control for resolving such issues as flight performance, self-protection, and extended life structures. Importantly, the text deals with a number of practically significant considerations: tuning complexity of design, real-time capability, evaluation of worst-case performance, robustness in harsh environments, and extensibility when development or adaptation is required. Coverage of such issues helps to draw the advanced concepts arising from academic research back towards the technological concerns of industry. Initial coverage of basic definitions and ideas, and a literature review, gives way to a treatment of electrical flight control system failures, oscillatory failure, runaway, and jamming. Advanced fault detection and diagnosis for linear and linear parameter-varying systems are described. Lastly, recovery strategies appropriate to remaining actuator, sensor, communications resources are developed. The authors exploit experience gained in research

collaboration with academic and major industrial partners to validate advanced fault diagnosis and fault tolerant control techniques with realistic benchmarks or real world aeronautical and space systems Consequently the results presented in Fault Diagnosis and Fault Tolerant Control and Guidance for Aerospace will be of interest in both academic and aerospace industrial milieu
