Notes

¹Test scores, like other measurements, are not perfectly precise. The confidence bands around test scores mark the ranges in which the test taker's true scores probably lie. The diamond shapes and shading show that the test taker's true scores are more likely to be their reported scores (in the second column) than the other scores in the confidence bands.

²The percentile ranks of scores are the percentages of test takers who received the same scores or lower scores. The percentile ranks are updated in May 1 every year to reflect the results from previous calendar years.

³For the four sections, non-overlapping confidence bands show a test taker's likely strengths and weaknesses. Overlapping confidence bands suggest that there are not meaningful differences in performance between sections.
