Recent Developments In Bridge Engineering K.M. Mahmoud,2003-01-01 This book contains a selected number of papers that were presented at the Second New York City Bridge Conference organized by the Bridge Engineering Association It represents the state of the art papers from different countries on a wide spectrum of topics in bridge engineering

Geotechnical Related Development and Implementation of Load and Resistance Factor Design (LRFD) Methods George G. Goble,1999 This synthesis report will be of interest to geotechnical structural and bridge engineers especially those involved in the development and implementation of the geotechnical aspects of the AASHTO Bridge Code The synthesis documents a review of geotechnical related LRFD specifications and their development worldwide to compare them with the current AASHTO LRFD Bridge Code Design procedures for foundations earth retaining structures and culverts are summarized and compared with the methods specified by the AASHTO code This TRB report provides information designed to assist engineers in implementing the geotechnical features of LRFD methods Information for the synthesis was collected by surveying U S and Canadian transportation agencies and by conducting a literature search using domestic and international sources Interviews were also conducted with selected international experts The limited available experience in the United States and information from international practice are discussed to understand the problems that have arisen in order that solutions may be found Based on the studies reported here suggestions for improving the code are identified

*The Impact of the AASHTO LRFD Design Code on Bridge Stiffness and Strength* Thomas Thaxton Baber,2007 The Commonwealth of Virginia is currently transitioning from the long used AASHTO Allowable Stress Design ASD specification to AASHTO s Load and Resistance Factor Design LRFD specification The new specification features revised live loads more conservative impact factors a new load distribution method for analysis and a probabilistically based limit state design approach Traditional deflection limits have been made optional in the LRFD format The extensive changes in the specification make it unclear as to whether bridges designed using the LRFD specification will be more or less flexible than those designed using the ASD specification A series of bridges were designed using both ASD and LRFD formats to investigate what if any significant changes in bridge flexibility might be encountered and whether deflection limits are more or less likely to be violated with the LRFD format Based upon the design of six single span bridges with varying spans and numbers of girders and a partial design of a three span continuous bridge it was concluded that the LRFD designs tend to be lighter and more economical in general and also tend to be more flexible than ASD designs of the same bridge The weight savings appears to be more pronounced on single span bridges than on multiple span bridges because of the greater significance of local and lateral stability concerns in the finished bridges for multi span bridges **Redundancy in**
