The Mathematical Questions Proposed in the Ladies' Diary Thomas Leybourn, 1817

EU Energy and Climate Policy after COVID-19 and the Invasion of Ukraine Matúš Mišík, Andrea Figulová, 2024-10-14 This book discusses the impact of the COVID 19 pandemic and the Russian invasion of Ukraine on the European Union's climate and energy policy. By examining the positions of the various actors involved, the book analyses whether the COVID 19 pandemic and the Russian invasion of Ukraine has contributed to greater unity, decarbonisation and security of energy supply and if not, whether these crises prompted member states to turn inwards and opt for national solutions to climate and energy challenges. It thus provides a new outlook for EU energy policy in relation to the experience of the two crises. This book will be of key interest to scholars, students and practitioners of climate and energy policy, energy security, EU policy and more broadly to energy politics, European integration and European Union governance.

Visible Variation Pamela M. Perniss, Roland Pfau, Markus Steinbach, 2008-09-25 It has been argued that properties of the visual gestural modality impose a homogenizing effect on sign languages, leading to less structural variation in sign language structure as compared to spoken language structure. However, until recently, research on sign languages was limited to a number of Western sign languages. Before we can truly answer the question of whether modality effects do indeed cause less structural variation, it is necessary to investigate the similarities and differences that exist between sign languages in more detail and especially to include in this investigation less studied sign languages. The current research climate is testimony to a surge of interest in the study of a geographically more diverse range of sign languages. The volume reflects that climate and brings together work by scholars engaging in comparative sign linguistics research. The 11 articles discuss data from many different signed and spoken languages and cover a wide range of topics from different areas of grammar, including phonology, word pictures, morphology, pronouns, negation and auxiliaries, syntax, word order, interrogative clauses, auxiliaries, negation and referential shift and pragmatics, modal meaning and referential shift. In addition to this, the contributions address psycholinguistic issues, aspects of language change and issues concerning data collection in sign languages, thereby providing methodological guidelines for further research. Although some papers use a specific theoretical framework for analyzing the data, the volume clearly focuses on empirical and descriptive aspects of sign language variation.

Narayan Sah, **Statistical Implicative Analysis** Régis Gras, Einoshin Suzuki, Fabrice Guillet, Filippo Spagnolo, 2008-04-29 Statistical implicative analysis is a data analysis method created by Régis Gras almost thirty years ago, which has a significant impact on a variety of areas ranging from pedagogical and psychological research to data mining. Statistical implicative analysis (SIA) provides a framework for evaluating the strength of implications; such implications are formed through common knowledge acquisition techniques in any learning process, human or artificial. This new concept has developed into a unifying methodology and has generated a powerful convergence of thought between mathematicians, statisticians, psychologists,

specialists in pedagogy and last but not least computer scientists specialized in data mining This volume collects significant research contributions of several rather distinct disciplines that benefit from SIA Contributions range from psychological and pedagogical research bioinformatics knowledge management and data mining Annual Report of Activities of the Effluent Standards and Water Quality Information Advisory Committee United States.
