The Ultimate Meaningfulness of the Universe: Knowing God, Volume 2 Anthony E. Mansueto, 2012-09-05 Is the universe ultimately meaningful ordered to an end of transcendental value Or is it merely the product of random interactions in which organization emerges only locally and by chance and is conserved only so long as rare and improbable conditions prevail There can in fact be no more important question for on the resolution of this question depends the significance of all our worldly labors The Ultimate Meaningfulness of the Universe

represents a new departure in this debate arguing that because it describes rather than explains the universe mathematical physics is radically incapable of addressing this question The book argues for a new scientific research paradigm that while incorporating and building on the description of the universe supplied by modern mathematical physics goes beyond it in a restored discipline of teleological explanation The book sketches applications in the physical biological and social domains and shows that powerful evidence already points toward the ultimate meaningfulness of the universe **Interdisciplinary**

Journal for Germanic Linguistics and Semiotic Analysis, 2003 *Memory and Learning in Plants* Frantisek

Baluska, Monica Gagliano, Guenther Witzany, 2018-04-23 This book assembles recent research on memory and learning in plants Organisms that share a capability to store information about experiences in the past have an actively generated background resource on which they can compare and evaluate coming experiences in order to react faster or even better This is an essential tool for all adaptation purposes Such memory learning skills can be found from bacteria up to fungi animals and plants although until recently it had been mentioned only as capabilities of higher animals With the rise of epigenetics the context dependent marking of experiences on the genetic level is an essential perspective to understand memory and learning in organisms Plants are highly sensitive organisms that actively compete for environmental resources They assess their surroundings estimate how much energy they need for particular goals and then realize the optimum variant They take measures to control certain environmental resources They perceive themselves and can distinguish between self and non self They process and evaluate information and then modify their behavior accordingly The book will guide scientists in further investigations on these skills of plant behavior and on how plants mediate signaling processes between themselves and the environment in memory and learning processes **Genesis Kinds** Todd Charles Wood, Paul A. Garner, 2009-01-22 Mission statement coresci.org Series Editor Todd Charles Wood Core Academy of Science encourages young Christian scholars to explore the hardest problems in creation Engineers sometimes classify problems as easy hard and impossible Easy problems are trivial because they can be solved merely by applying known principles Impossible problems cannot be solved no matter how hard we try Hard problems are the problems in between that require the most work but yield the greatest rewards Sometimes hard problems are accumulations of many easy problems and sometimes they turn out to be impossible When a hard problem is solved though it is widely celebrated For Christians and especially young age creationists understanding creation has many hard problems Evidences of the great age of the universe and earth can be difficult to explain Likewise with evidences of evolution Creationists reject the conventional explanations that involve millions of years and humans evolving from animals but alternative explanations that satisfy our scientific curiosity and our desire to remain true to the revealed Word of God are much rarer and not widely accepted It is much easier to focus on the detection of error rather than the more difficult discovery of truth This focus on error rather than truth pervades evangelical Christianity because it s relatively easy We all like the easy and impossible We teach our children to recite verses from the

Bible and answers to our catechisms but when they ask difficult questions we say Only God knows We might even scold them for being impertinent or irreverent Core Academy equips the next generation to tackle these great mysteries by first and most importantly helping young scholars to develop a bold confident faith All too often scholars who face challenging puzzles become disillusioned and stray from the faith Our first goal then must be enriching and nurturing strong faith in Jesus Christ as Savior and Creator

When a Human Gives Birth to a Raven Rafael Rachel Neis,2023-06-06 A free ebook version of this title is available through Luminos University of California Press s Open Access publishing program Visit www.luminosoa.org to learn more This book investigates rabbinic treatises relating to animals humans and other life forms Through an original analysis of creaturely generation and species classification by late ancient Palestinian rabbis and other thinkers in the Roman Empire Rafael Rachel Neis shows how rabbis blurred the lines between humans and other beings even as they were intent on classifying creatures and tracing the contours of what it means to be human Recognizing that life proliferates by mechanisms beyond sexual copulation between two heterosexual male and female individuals of the same species the rabbis proposed intricate alternatives In parsing a variety of creatures they considered overlaps and resemblances across seemingly distinct species upsetting in turn unmitigated claims of human distinctiveness When a Human Gives Birth to a Raven enters conversations in animal studies queer theory trans theory and feminist science studies

to provincialize sacrosanct ideals of reproduction in favor of a broader range that spans generation kinship and species The book thereby offers powerful historical alternatives to the paradigms associated with so called traditional ideas **Foucault and Animals** Matthew Chrulew, Dinesh Joseph Wadiwel, 2016-11-01 Foucault and Animals is the first collection of its kind to explore the relevance of Michel Foucault's thought for the question of the animal Chrulew and Wadiwel bring together essays from emerging and established scholars that illuminate the place of animals and animality within Foucault's texts and open up his highly influential range of concepts and methods to different domains of human animal relations including experimentation training zoological gardens pet keeping agriculture and consumption Touching on themes such as madness and discourse power and biopolitics government and ethics and sexuality and friendship the volume takes the fields of Foucault studies and human animal studies into promising new directions **Double Exposures** Mieke Bal, 2012-09-10 A feminist literary theorist specialist in Rembrandt and a scholar with a knack for reading Old Testament stories Mieke Bal weaves a tapestry of signs and meanings that enrich our senses Her subject is the act of showing the gesture of exposing to view In a museum for example the object is on display made visually available That's how it is the display proclaims But who says so Bal's subjects are displays from the American Museum of Natural History paintings by such figures as Courbet Caravaggio Artemisia Gentileschi and Rembrandt as well as works by twentieth century artists and such literary texts as Shakespeare's Rape of Lucrece Readings for a History of Anthropological Theory, Fifth Edition Liam D. Murphy, 2017-01-01 The fifth edition of this bestselling reader builds a strong foundation in both classical and contemporary theory with a sharpened focus on gender and anthropology and the anthropology of new media and technology Short introductions and key terms accompany every reading and light annotations have been added to aid students in reading original articles Used on its own or together with A History of Anthropological Theory Fifth Edition this anthology offers a flexible and unrivalled introduction to anthropological theory that reflects not only the history but also the changing nature of the discipline today Readings for a History of Anthropological Theory Paul A. Erickson, Liam Donat Murphy, 2013-01-01 This comprehensive anthology offers over 40 readings that are critical to the understanding of anthropological theory and the development of anthropology as an academic discipline The fourth edition maintains a strong focus on the four field roots of the discipline in North America but has been reorganized with a new section on twenty first century theory including coverage of postcolonial and public anthropology New key terms and introductions accompany each reading and a revamped glossary makes the book more student friendly Used on its own or together with the overview text A History of Anthropological Theory Fourth Edition this anthology offers a flexible and unrivalled introduction to anthropological theory that reflects not only the history but also the changing nature of the discipline today For additional resources visit the Teaching Theory page at www.utpteachingculture.com **Race?** Ian Tattersall, Rob DeSalle, 2011-09-01 Race has provided the rationale and excuse for some of the worst atrocities in human history Yet according to many biologists physical

anthropologists and geneticists there is no valid scientific justification for the concept of race To be more precise although there is clearly some physical basis for the variations that underlie perceptions of race clear boundaries among races remain highly elusive from a purely biological standpoint Differences among human populations that people intuitively view as racial are not only superficial but are also of astonishingly recent origin In this intriguing and highly accessible book physical anthropologist Ian Tattersall and geneticist Rob DeSalle both senior scholars from the American Museum of Natural History explain what human races actually are and are not and place them within the wider perspective of natural diversity They explain that the relative isolation of local populations of the newly evolved human species during the last Ice Age when Homo sapiens was spreading across the world from an African point of origin has now begun to reverse itself as differentiated human populations come back into contact and interbreed Indeed the authors suggest that all of the variety seen outside of Africa seems to have both accumulated and started reintegrating within only the last 50 000 or 60 000 years the blink of an eye from an evolutionary perspective The overarching message of *Race Debunking a Scientific Myth* is that scientifically speaking there is nothing special about racial variation within the human species These distinctions result from the working of entirely mundane evolutionary processes such as those encountered in other organisms
