address their speeches Then in the oral presentations the excellent papers we had selected were presented by their authors one by one We are glad to share with you that we ve selected a bunch of high quality papers from the submissions and compiled them into the proceedings after rigorously reviewing them These papers feature but are not limited to the following topics Computer Art Visual Design Digital Media Innovative Technology etc All the papers have been checked through rigorous review and processes to meet the requirements of publication We would like to acknowledge all of those who supported ADDT 2022 and made it a great success In particular we would like to thank the European Alliance for Innovation EAI for the hard work of all its colleagues in publishing this paper volume We sincerely hope that the ADDT 2022 turned out to be a forum for excellent discussions that enable new ideas to come about promoting collaborative research *Journal of the American Veterinary Medical Association* American Veterinary Medical Association,2004 Vols for 1915 49 and 1956 include the Proceedings of the annual meeting of the association *Boys' Life* ,1961 Monitoring endogenous GPCRs: lessons for drug design Dominique Massotte,2015-10-07 G protein coupled receptors GPCRs are integral membrane proteins forming the fourth largest superfamily in the human genome Many of these receptors play key physiological roles and several pathologies have been associated with receptor functional abnormalities GPCRs therefore represent important goals for drug design in pharmaceutical companies since they constitute the target of about one third of the drugs currently on the market However endogenous GPCRs are most often difficult to study because of a lack of tools to target them specifically and single out their response to physiological or drug elicited stimulations Hence studies mostly focused on recombinant receptors expressed in a variety of cellular models that do not always closely reflect the receptor natural environment and often deal with levels of expression exceeding by far physiological ranges Recent technological developments combining for example genetically modified animals and advanced imaging approaches have improved our ability to visualize endogenous GPCRs To date trailing receptor activation subsequent intracellular redistribution changes in signaling cascade up to integrated response to a drug elicited stimulation is at hand though the impact of a physiological challenge on receptor dynamics remains a major issue Data however suggest that the receptor may embrace a different fate depending on the type of stimulation in particular if sustained or repeated This suggests that current drugs may only partially mimic the genuine response of the receptor and may explain at least in part their secondary effects Commonalities and specificities between physiological and drug induced activation can thus represent valuable guidelines for the design of future drugs **Mandell, Douglas, and Bennett's Principles and Practice of Infectious Diseases E-Book** John E.
