Animal Naming Test:

A Compendium of Neuropsychological Tests Esther Strauss, Elisabeth M. S. Sherman, Otfried Spreen, 2006 This compendium gives an overview of the essential aspects of neuropsychological assessment practice It is also a source of critical reviews of major neuropsychological assessment tools for the use of the practicing clinician Neuropsychological Assessment Muriel Deutsch Lezak, 1995-03-02 The 12 chapters in the second section contain nearly all of the tests and assessment techniques covered in the previous editions plus many additional ones including newly developed neuropsychological tests tests from other branches of psychology research techniques that have only recently been introduced into clinical neuropsychology tests originating in Europe and elsewhere and a few measures as yet untried by neuropsychology that appear to be potentially useful for neuropsychological purposes Thus the third edition of Neuropsychological Assessment maintains its multipurpose functions as an authoritative textbook reference work and practitioner's manual Handbook of Normative Data for Neuropsychological Assessment Maura Mitrushina, Kyle B. Boone, Jill Razani, Louis F. D'Elia, 2005-02-10 When Handbook of Normative Data for Neuropsychological Assessment was published in 1999 it was the first book to provide neuropsychologists with summaries and critiques of normative data for neuropsychological tests The Second Edition which has been revised and updated throughout presents data for 26 commonly used neuropsychological tests including Trailmaking Color Trails Stroop Color Word Interference Auditory Consonant Trigrams Paced Auditory Serial Addition Ruff 2 and 7 Digital Vigilance Boston Naming Verbal Fluency Rey Osterrieth Complex Figure Hooper Visual Fluency Design Fluency Tactual Performance Wechsler Memory Scale Revised Rey Auditory Verbal learning Hopkins Verbal learning WHO UCLA Auditory Verbal Learning Benton Visual Retention Finger Tapping Grip Strength Dynamometer Grooved Pegboard Category and Wisconsin Card Sorting tests In addition California Verbal learning CVLT and CVLT II CERAD List Learning and selective Reminding Tests as well as the newest version of the Wechsler Memory Scale WMS III and WMS IIIA are reviewed Locator tables throughout the book guide the reader to the sets of normative data that are best suited to each individual case depending on the demographic characteristics of the patient and highlight the advantages associated with using data for comparative purposes Those using the book have the option of reading the authors critical review of the normative data for a particular test or simply turning to the appropriate data locator table for a quick reference to the relevant data tables in the Appendices The Second Edition includes reviews of 15 new tests The way the data are presented has been changed to make the book easier to use Meta analytic tables of predicted values for different ages and education where relevant are included for nine tests that have a sufficient number of homogeneous datasets No other reference offers such an effective framework for the critical evaluation of normative data for neuropsychological tests Like the first edition the new edition will be welcomed by practitioners researchers teachers and graduate students as a unique and valuable contribution to the practice of neuropsychology *Guide to Psychological Assessment with Hispanics* Lorraine

T. Benuto, 2012-09-19 This book focuses on diversity culture and ethnicity as they relate to psychological assessment of Hispanics. It is a how-to guide for clinicians, researchers, and instructors working with Hispanic clients. Each chapter contains an overview of cultural considerations needed for assessing the Hispanic client, followed by a specific exploration of the assessment measures available and the research that has been conducted on these measures with Hispanic participants. An exploration of the strengths and limitations of each assessment measure is included. Considering that ethnocultural minority individuals who are of Hispanic/Latino origin make up the largest ethnocultural minority group in the United States, guidelines for working with this population are a must. Given that a large subset of this percentage is composed of immigrants, many of whom do not speak English or who have learned English as a second language, special considerations for effective psychological assessment are necessary. This book fills a gap in the scientific literature by consolidating the research on psychological assessment with Hispanic samples into one comprehensive volume and providing simple recommendations for the psychological assessment of Hispanic clients. An exploration of the general psychological assessment domains, e.g., personality, intelligence, is included with references to research on the major assessment measures used in the field. A more specific exploration of psychodiagnostic assessment measures follows, including the assessment of mood disorders, anxiety disorders, sexual dysfunction, psychosis, etc. Several chapters are dedicated to specialized assessment, including neuropsychological assessment, forensic assessment, and school-based assessment, overall creating the most comprehensive up-to-date research-based compendium of psychological assessment measures for use with Hispanic clients.

Assessment of Feigned Cognitive Impairment, Second Edition Kyle Brauer Boone, 2021-06-04 The go-to resource for clinical and forensic practice has now been significantly revised with 85% new material reflecting the tremendous growth of the field. Leading authorities synthesize the state of the science on symptom feigning in cognitive testing and present evidence-based recommendations for distinguishing between credible and noncredible performance. A wide range of performance validity tests (PVTs) and symptom validity tests (SVTs) are critically reviewed and guidelines provided for applying them across differing cognitive domains and medical, neurological, and psychiatric conditions. The book also covers validity testing in forensic settings and with particular populations such as ethnic and linguistic minority group members. New to This Edition: Numerous new authors; a greatly expanded range of topics and the latest data throughout; Clinical primer chapter on how to select and interpret appropriate PVTs; Chapters on methods for validity testing in visual spatial processing, speed, and language domains, and with cognitive screening instruments and personality inventories; Chapter on methods for interpreting multiple PVTs in combination; Chapters on additional populations: military personnel, children, and adolescents; and clinical problems: dementia, somatoform conversion disorder. Chapters on research methods for validating PVTs, base rates of feigned mild traumatic brain injury, and more.
