Encyclopedia of Science and Technology Communication Susanna Hornig Priest, 2010-07-14

The explosion of scientific information is exacerbating the information gap between richer, poorer, educated, less educated publics. The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind. This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences. Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments. Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences. Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research. Science communication often in new forms must expand to meet all these needs. Providing a comprehensive introduction to students, professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each. For this reason, science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses. Even so, those entering the field rarely will have a comprehensive background in both science and communication studies. This circumstance underscores the importance of compiling useful reference materials. The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources. Science communicators need to understand more than how to interpret scientific facts and conclusions; they need to understand basic elements of the politics, sociology and philosophy of science as well as relevant media and communication theory, principles of risk communication, new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges. This work will help to develop and enhance such understanding as it addresses these challenges and more. Topics covered include:

advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics

Schizophrenia: A Consequence of Gene-Environment Interactions? Tim Karl, Jonathon C. Arnold,2015-06-06 Schizophrenia is a multi factorial disease characterized by a high heritability and environmental risk factors e g stress and cannabis use In recent years an increasing number of researchers worldwide have started investigating the two hit hypothesis of schizophrenia predicting that genetic and environmental risk factors interactively cause the development of the disorder This work is starting to produce valuable new animal models and reveal novel insights into the pathophysiology of schizophrenia Eventually it might help advance studies of the molecular pathways involved in this mental disorder and propose more specific molecular medicine However the complexity of this multi factorial line of research has also caused difficulties in data interpretation and comparison Our research topic is intended to cover past and current directions in research dedicated to the understanding and measurement of gene environment interactions GxE in schizophrenia the neurobiological and behavioural consequences of such interactions as well as the challenges and limitations one encounters when working on complex aetiological systems
