Fundamentals of Electric Aircraft Pascal Thalin, Ravi Rajamani, Jean-Charles Mare, Sven Taubert, 2018-12-18

Fundamentals of Electric Aircraft was developed to explain what the electric aircraft stands for by offering an objective view of what can be expected from the giant strides in innovative architectures and technologies enabling aircraft electrification. Through tangible case studies a deep insight is provided into this paradigm shift cutting across various aircraft segments from General Aviation to Large Aircraft. Addressing design constraints and timelines foreseen to reach acceptable performance and maturity levels *Fundamentals of Electric Aircraft* puts forward a general view of the progress made to date and what to expect in the years to come. Drawing from the expertise of four industry veterans Pascal Thalin editor Ravi Rajamani Jean Charles Mare and Sven Taubert contributors it addresses futuristic approaches but does not depart too far from the operational down to earth realities of everyday business. *Fundamentals of Electric Aircraft* also offers analyses on how performance enhancements and fuel burn savings may bring more value for money as long as new electric technologies deliver on their promises. *Green Building: An Engineering Approach to Sustainable Construction* Christian M.

Carrico, 2025-06-05 *Green Building: An Engineering Approach to Sustainable Construction* fills a void in green building which has good textbook options for practitioners architects and sustainability experts but not an engineering focused textbook focused on green building. This new text takes an engineering approach to evaluating green building techniques systems and materials. The book examines the built environment from inside out looking at minimizing environmental impacts while also considering the economics and energy use and efficiency. While not a test prep book it will provide the knowledge foundation that will help prepare the students to take the Leadership in Energy and Environmental Design accreditation exam. As students are often unclear on the evolving employment prospects in this field particularly for the engineer the textbook also features six case studies showing different career pathways for engineers in this arena. Takes a quantitative and analytical engineering approach to evaluating green building techniques systems and materials. Includes dedicated engineering examples and end of chapter problems that help develop students problem solving and analytical skills. Combines conceptual and calculational aspects that link to both big picture issues e.g. how many Hiroshima blasts per year is the radiative forcing equivalent to along with everyday considerations like climate change real life experiences how much do I have to insulate my chicken coop to keep them warm passively in the winter. Links textbook coverage to ABET criteria for accreditation of engineering programs. **Aircraft Maintenance & Repair, Eighth Edition** Ronald Sterkenburg, Michael J.
