*Light Science* Thomas Rossing, Christopher J Chiaverina, 1999-09-24 Intended for students in the visual arts and for others with an interest in art but with no prior knowledge of physics this book presents the science behind what and how we see The approach emphasises phenomena rather than mathematical theories and the joy of discovery rather than the drudgery of derivations The text includes numerous problems and suggestions for simple experiments and also considers such questions as why the sky is blue how mirrors and prisms affect the colour of light how compact disks work and what visual illusions can tell us about the nature of perception It goes on to discuss such topics as the optics of the eye and camera the different sources of light photography and holography colour in printing and painting as well as computer imaging and processing

*Seeing the Light* David Falk, Dieter Drill, David Stork, 2018-01-31 The clearest and most complete non mathematical study of light available with updated material and a new chapter on digital photography Finally a book on the physics of light that doesn t require advanced mathematics to understand *Seeing the Light* is the most accessible and comprehensive study of optics and light on the market With a focus on conceptual study *Seeing the Light* leaves the heavy duty mathematics behind instead using practical analogies and simple empirical experiments to teach the material Each chapter is a self contained lesson making it easy to learn about specific optical concepts without having to read the whole book over Inside you ll find clear and easy to understand explanations of topics including Processes of vision and the eye Atmospheric optical phenomena Color perception and illusions Color in nature and in art Digital photography Holography And more Diagrams photos and illustrations help bring difficult concepts to life and optional sections at the ends of chapters explore the more advanced aspects of each topic A truly one of a kind book for physics students and teachers this updated edition of *Seeing the Light* is not to be missed

*M.C. Escher's Legacy* Doris Schattschneider, 2003 The CD ROM is an extension of the book It contains color versions of many of the art works that are shown in the book in black and white as well as additional work by the artists It gives vignettes of the conference animations short videos and interactive puzzles

Page vii *Viewpoints* Marc Frantz, Annalisa Crannell, 2011-07-05 An undergraduate textbook devoted exclusively to

relationships between mathematics and art Viewpoints is ideally suited for math for liberal arts courses and mathematics courses for fine arts majors The textbook contains a wide variety of classroom tested activities and problems a series of essays by contemporary artists written especially for the book and a plethora of pedagogical and learning opportunities for instructors and students Viewpoints focuses on two mathematical areas perspective related to drawing man made forms and fractal geometry related to drawing natural forms Investigating facets of the three dimensional world in order to understand mathematical concepts behind the art the textbook explores art topics including comic anamorphic and classical art as well as photography while presenting such mathematical ideas as proportion ratio self similarity exponents and logarithms Straightforward problems and rewarding solutions empower students to make accurate sophisticated drawings Personal essays and short biographies by contemporary artists are interspersed between chapters and are accompanied by images of their work These fine artists who include mathematicians and scientists examine how mathematics influences their art Accessible to students of all levels Viewpoints encourages experimentation and collaboration and captures the essence of artistic and mathematical creation and discovery Classroom tested activities and problem solving Accessible problems that move beyond regular art school curriculum Multiple solutions of varying difficulty and applicability Appropriate for students of all mathematics and art levels Original and exclusive essays by contemporary artists Forthcoming Instructor s manual available only to teachers

*Light Science* Thomas D. Rossing, Christopher J. Chiaverina, 2020-01-03 Intended for students in the visual arts and for others with an interest in art but with no prior knowledge of physics this book presents the science behind what and how we see The approach emphasises phenomena rather than mathematical theories and the joy of discovery rather than the drudgery of derivations The text includes numerous problems and suggestions for simple experiments and also considers such questions as why the sky is blue how mirrors and prisms affect the colour of light how compact disks work and what visual illusions can tell us about the nature of perception It goes on to discuss such topics as the optics of the eye and camera the different sources of light photography and holography colour in printing and painting as well as computer imaging and processing

The Geometry of an Art Kirsti Andersen, 2008-11-23 Key Issues ver since the late 1970s when Pia Holdt a student of mine at the time and Jed Buchwald a colleague normally working in another field made E me aware of how fascinating the history of perspective constructions is I have wanted to know more My studies have resulted in the present book in which I am mainly concerned with describing how the understanding of the geometry behind perspective developed and how and to what extent new insights within the mathematical theory of perspective influenced the way the discipline was presented in textbooks In order to throw light on these aspects of the history of perspective I have chosen to focus upon a number of key questions that I have divided into two groups Questions Concerning the History of Geometrical Perspective How did geometrical constructions of perspective images emerge How were they understood mathematically How did the geometrical constructions give rise to a mathematical theory of perspective How did this theory

evolve Inconnectionwith the last question it is natural to take up the following themes      *Pixels & Paintings* David G. Stork, 2023-11-14 PIXELS PAINTINGS The discussion is firmly grounded in established art historical practices such as close visual analysis and an understanding of artists working methods and real world examples demonstrate how computer assisted techniques can complement traditional approaches Dr Emilie Gordenker Director of the Van Gogh Museum The pioneering presentation of computer based image analysis of fine art forging a dialog between art scholars and the computer vision community In recent years sophisticated computer vision graphics and artificial intelligence algorithms have proven to be increasingly powerful tools in the study of fine art These methods some adapted from forensic digital photography and others developed specifically for art empower a growing number of computer savvy art scholars conservators and historians to answer longstanding questions as well as provide new approaches to the interpretation of art Pixels Paintings provides the first and authoritative overview of the broad range of these methods which extend from image processing of palette marks brush strokes and shapes up through analysis of objects poses style composition to the computation of simple interpretations of artworks This book stresses that computer methods for art analysis must always incorporate the cultural contexts appropriate to the art studies at hand a blend of humanistic and scientific expertise Describes powerful computer image analysis methods and their application to problems in the history and interpretation of fine art Discusses some of the art historical lessons and revelations provided by the use of these methods Clarifies the assumptions and applicability of methods and the role of cultural contexts in their use Shows how computation can be used to analyze tens of thousands of artworks to reveal trends and anomalies that could not be found by traditional non computer methods Pixels Paintings is essential reading for computer image analysts and graphics specialists conservators historians students psychologists and the general public interested in the study and appreciation of art      **Fragments of Infinity** Ivars Peterson, 2008-05-02 A visual journey to the intersection of math and imagination guided by an award winning author Mathematics is right brain work art left brain right Not so This intriguing book shows how intertwined the disciplines are Portraying the work of many contemporary artists in media from metals to glass to snow Fragments of Infinity draws us into the mysteries of one sided surfaces four dimensional spaces self similar structures and other bizarre or seemingly impossible features of modern mathematics as they are given visible expression Featuring more than 250 beautiful illustrations and photographs of artworks ranging from sculptures both massive and minute to elaborate geometric tapestries and mosaics of startling complexity this is an enthralling exploration of abstract shapes space and time made tangible Ivars Peterson Washington DC is the mathematics writer and online editor of Science News and the author of The Jungles of Randomness Wiley 0 471 16449 6 as well as four previous trade books      **Design Strategies for Reimagining the City** Linda Matthews, 2022-06-24 Design Strategies for Reimagining the City is situated between projective geometry optical science and architectural design It draws together seemingly unrelated fields in a series of new digital design tools and techniques underpinned by tested prototypes The book

reveals how the relationship between architectural design and the ubiquitous urban camera can be used to question established structures of control and ownership inherent within the visual model of the Western canon Using key moments from the broad trajectory of historical and contemporary representational mechanisms and techniques it describes the image's impact on city form from the inception of linear perspective geometry to the digital turn The discussion draws upon combined fields of digital geometry the pictorial adaptation of human optical cues of colour brightness and shape and modern image capture technology webcams mobile phones and UAVs to demonstrate how the permeation of contemporary urban space by digital networks calls for new architectural design tools and techniques A series of speculative drawings and architectural interventions that apply the new design tools and techniques complete the book Aimed at researchers academics and upper level students in digital design and theory it makes a timely contribution to the ongoing and broadly debated relationship between representation and architecture

Drawing Futures Bob Sheil, Frédéric Migayrou, Luke Pearson, Laura Allen, 2016-11-11 Drawing Futures brings together international designers and artists for speculations in contemporary drawing for art and architecture Despite numerous developments in technological manufacture and computational design that provide new grounds for designers the act of drawing still plays a central role as a vehicle for speculation There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the world In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world the changing status of the drawing and its representation as a political act demands a platform for reflection and innovation Drawing Futures will present a compendium of projects writings and interviews that critically reassess the act of drawing and where its future may lie Drawing Futures focuses on the discussion of how the field of drawing may expand synchronously alongside technological and computational developments The book coincides with an international conference of the same name taking place at The Bartlett School of Architecture UCL in November 2016 Bringing together practitioners from many creative fields the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas

**The Atomized Body** Max Liljefors, Susanne Lundin, Andr a Wiszmeg, 2015-02-01 Referring to the focus of the biosciences on molecular particles of the human biology such as stem cells genes and neurons this account examines the relationships between culture society and bioscientific research Showing that the atomized body is indeed socially and culturally embedded in plural and complex ways it argues that biomedicine and biotechnology do not only intersect with the human body but also reshape our perceptions of selfhood and life From a multidisciplinary perspective this volume explores the biosciences and the atomized body in their social cultural and philosophical contexts

*Anamorphic Art* Jurgis Baltru aitis, 1977 *Devices of Wonder* Barbara Maria Stafford, Frances Terpak, J. Paul Getty Museum, 2001 Exhibition held at the J Paul Getty Museum Los Angeles 13 November 2001 to 3 February 2002

**In-Between: Architectural Drawing and Imaginative Knowledge in Islamic and Western Traditions** Hooman Koliji,2016-03-09 Contemporary technical architectural drawings in establishing a direct relationship between the drawing and its object tend to privilege the visible physical world at the expense of the invisible intangible ideas and concepts including that of the designer s imagination As a result drawing may become a utilitarian tool for documentation devoid of any meaningful value in terms of a kind of knowledge that could potentially link the visible and invisible This book argues that design drawings should be recognized as intermediaries mediating between the world of ideas and the world of things spanning the intangible and tangible The notion of the Imaginal as an intermediary between the invisible and visible is discussed showing how architectural drawings lend themselves to this notion by performing as creative agents contributing not only to the physical world but also penetrating the realm of concepts The book argues that this in between quality to architectural drawing is essential and that it is critical to perceive drawings as subtle bodies that hold physical attributes for example form proportion color highly evocative yet with no matter Focusing on Islamic geometric architectural drawings both historical and contemporary it draws on key philosophical and conceptual notions of imagination from the Islamic tradition as these relate to the creative act In doing so this book not only makes important insights into the design process and act of architectural representation but more broadly it adds to debates on philosophies of the imagination linking both Western and Islamic traditions
