Collaborative Clinical Education Jane Westberg, PhD,Hilliard Jason, MD, EdD,1992-11-15 This book is intended for those who are now and those who intend to become clinical teachers in the health professions Its primary focus is the teaching of medical students and residents but the principles discussed apply equally to teaching students in other health

professions The main focus is on the process of teaching the strategies and tactics involved in helping others learn and the authors discuss the generic steps strategies and principles of effective teaching that apply in any clinical setting They do however draw numerous examples from clinical education in a variety of settings The authors specifically stress the notion of collaboration an issue closely related to the public s considerable dissatisfaction with the modern health care system to create a more effective responsive system they argue there is a need to change the ways that health care is provided and the way it is taught A collaborative approach is needed in both health care and medical education one that involves partnerships between clinicians and patients and between teachers and learners Also prominent throughout the book is the idea that clinical education can be planned and conducted in far more systematic ways than is now common An overarching goal of the book is to provide readers with an enlarged set of options to consider using when faced with the inevitable multiplicity of decisions confronting clinical educators

Medinfo Marius Fieschi, Enrico Coiera, Yu-Chan Jack Li, 2004 A fundamental challenge for medical informatics is to develop and apply better ways of understanding how information technologies and methods can help support the best care for every patient every day given available medical knowledge and resources In order to provide the most effective healthcare possible the activities of teams of health professionals have to be coordinated through well designed processes centered on the needs of patients For information systems to be accepted and used in such an environment they must balance standardization based on shared medical knowledge with the flexibility required for customization to the individual patient Developing innovative approaches to design and build evidence based careflow management systems is essential for providing the knowledge management infrastructure of health care organizations that seeks to increase performance in delivering high quality care services by efficiently exploiting available resources Parallel challenges arise in the organization of research at the biological and clinical levels where the focus on systematically organizing and supporting processes of scientific inquiry by novel informatics methods and databases are in their very early stages These Proceedings of Medinfo 2004 demonstrate the base of knowledge medical informatics professionals will collectively draw upon in the years ahead to meet these challenges and realize opportunities
