2003 National Mathcounts Sprint Round Solutions:

Competition and Chaos Robert W. Crandall, 2005-04-26 The 1996 Telecommunications Act was an attempt to increase competition among telecommunications providers in the United States by reducing regulatory barriers to market entry. This competition was expected to drive innovation in the telecommunications sector and reap economic benefits for both American consumers and telecommunications providers. The legislation, however, had a markedly different impact. While many of the more aggressive providers enjoyed sharp short-term rises in stock market values, they soon faced sudden collapse, leaving consumers with little or no long-term benefit. In *Competition and Chaos*, Robert W. Crandall analyzes the impact of the 1996 act on economic welfare in the United States and how the act and its antecedents affected the major telecommunications providers. He argues that the act was far too stringent, inviting the Federal Communications Commission and state regulators to micromanage competitive entry into local telecommunications markets. Combined with the bursting of the dot-com and telecom stock market bubbles, this aggressive policy invited new and existing firms to invest billions of dollars unwisely, leading to the 2001-02 collapse of equity values throughout the sector. New entrants into the market invested more than 50 billion in unproductive assets that were quickly wiped out through massive failures. The 1996 act allowed the independent long-distance companies such as MCI and AT&T to live a few years longer. But today they are a threatened species caught in a downward spiral of declining prices and substantial losses. The industry is preparing for an intense battle for market share among three sets of carriers: the wireless companies, the local telephone carriers, and the cable television businesses. Each has its own particular advantage in one of the three major segments of the market: voice, data, and video, but none is assured a clear path to dominance. Although the telecom stock market collapse is What If? Randall Munroe, 2014 From the creator of the wildly popular webcomic xkcd, hilarious and informative answers to important questions you probably never thought to ask. Millions of people visit xkcd.com each week to read Randall Munroe's iconic webcomic. His stick figure drawings about science, technology, language, and love have an enormous dedicated following, as do his deeply researched answers to his fans' strangest questions. The queries he receives range from merely odd to downright diabolical: What if I took a swim in a spent nuclear fuel pool? Could you build a jetpack using downward-firing machine guns? What if a Richter 15 earthquake hit New York City? Are fire tornadoes possible? His responses are masterpieces of clarity and wit, gleefully and accurately explaining everything from the relativistic effects of a baseball pitched at near the speed of light to the many horrible ways you could die while building a periodic table out of all the actual elements. The book features new and never-before-answered questions along with the most popular answers from the xkcd website. *What If?* is an informative feast for xkcd fans and anyone who loves to ponder the hypothetical. **Ebook: Business Driven Information Systems** Paige Baltzan, Amy Phillips, 2014-10-16 *Business Driven Information Systems* 4e discusses various business initiatives first and how technology supports those initiatives second. Net Neutrality Christopher T. Marsden, 2010-01-18 This book is available as open access through the Bloomsbury Open Access programme and is available on www.bloomsburycollections.com Chris Marsden maneuvers through the hype articulated by Network Neutrality advocates and opponents He offers a clear headed analysis of the high stakes in this debate about the Internet's future and fearlessly refutes the misinformation and misconceptions that about Professor Rob Freiden Penn State University Net Neutrality is a very heated and contested policy principle regarding access for content providers to the Internet end user and potential discrimination in that access where the end user's ISP or another ISP blocks that access in part or whole The suggestion has been that the problem can be resolved by either introducing greater competition or closely policing conditions for vertically integrated service such as VOIP However that is not the whole story and ISPs as a whole have incentives to discriminate between content for matters such as network management of spam to secure and maintain customer experience at current levels and for economic benefit from new Quality of Service standards This includes offering a priority lane on the network for premium content types such as video and voice service The author considers market developments and policy responses in Europe and the United States draws conclusions and proposes regulatory recommendations
