, 2016-06-27 Issue 08 April May June 2016 Optimization Of Technological Processes For Machine Parts And Equipment Operating in Extreme Conditions A M Gafarov P G Suleymanov V A Gafarov The paper reviews the aspects of optimization of the technological processes for high precision machine parts and equipment operating in extreme conditions The obtained results are analyzed Ratio Of Power Indicators In The System Drilling String Drive B A Perminov V B Perminov Z H Yagubov E Z Yagubov In the mode of drilling a well transmission of rotation the drill string occur from the wellhead to the bottom hole Thus at the expense to the impact dissipative forces on the drill string in the bore hole may be stop of some part column twisting of stretched portion and stall bottom of column with accelerate of rotation after accumulating a sufficient level of

potential energy The stock of potential energy in the elastic column at the rotation of upper part the greater the more moment of resistance of stationary portion column Take place redistribution of power indicators along the length of the drill string that engender relaxation oscillations in the column to the disruption of the dynamic balance as condition of the column so and system drill string drive violates the dynamic stability of column and leads to a forced harmonic changes power of the drive of engine rig In this regard the definition of conditions for the occurrence of relaxation oscillations in the system drill string drive is a very urgent task Work is devoted to research of the power indicators of the drill string in the drilling operation and the definition of the necessary conditions for maintaining the dynamic equilibrium of the system It was shown that the accumulation of potential energy in the bottom of the column is more than the kinetic energy of the upper part always provokes relaxation oscillations in the system Makes recommendation that to enhance the dynamic stability of the work regime is necessary increase the moment of inertia of the drive of column and reduce the weight of the bottom hole of column
