Clinicians and scientists are increasingly recognising the importance of an evolutionary perspective in studying the aetiology prevention and treatment of human disease the growing prominence of genetics in medicine is further adding to the interest in evolutionary medicine In spite of this too few medical students or residents study evolution This book builds a compelling case for integrating evolutionary biology into undergraduate and postgraduate medical education as well as its intrinsic value to medicine Chapter by chapter the authors experts in anthropology biology ecology physiology public health and various disciplines of medicine present the rationale for clinically relevant evolutionary thinking They achieve this within the broader context of medicine but through the focused lens of maternal and child health with an emphasis on female reproduction and the early life biochemical immunological and microbial responses influenced by evolution The tightly woven and accessible narrative illustrates how a medical education that considers evolved traits can deepen our understanding of the complexities of the human body variability in health susceptibility to disease and ultimately help guide treatment prevention and public health policy However integrating evolutionary biology into medical education continues to face several roadblocks The medical curriculum is already replete with complex subjects and a long period of training The addition of an evolutionary perspective to this curriculum would certainly seem daunting and many medical educators express concern over potential controversy if evolution is introduced into the curriculum of their schools Medical education urgently needs strategies and teaching aids to lower the barriers to incorporating evolution into medical training In summary this call to arms makes a strong case for incorporating evolutionary thinking early in medical training to help guide the types of critical questions physicians ask or should be asking It will be of relevance and use to evolutionary biologists physicians medical students and biomedical research scientists *Epilepsy Abstracts* ,1980 **ANNA Journal** ,1988 **Journal of Investigative Medicine** ,1996-04 **Proceedings of the National Academy of Sciences of the United States of America** National Academy of Sciences (U.S.),2001 **Journal of the American Medical Association** ,1985-05 Family Medicine ,1996 **Dissertation Abstracts International** ,1994 **Indexes to the Epilepsy Accessions of the Epilepsy Information System: 40001-50000** ,1982 Most of the current scientific literature on the subject as well as much of the pertinent past literature Worldwide coverage Includes monographic and serial literature Classified arrangement Each entry gives bibliographical information and classification codes **Science Citation Index** ,1994 Vols for 1964 have guides and journal lists **INIS Atomindex** ,1983 **Abridged Index Medicus** ,1977 *Bioactive Peptides* John Howl, Sarah Jones,2009-04-23 Answering a long standing need in the pharmaceutical and biotechnology fields this definitive reference focuses on the biology pharmacology and therapeutic applications of endogenous peptide mediators and their analogues It takes peptide science beyond chemical synthesis strategies and into the realms of peptide biology and therapeutics It presents the overall contribution peptide science has made to molecular cellular and whole organism biology while

What is Mental Retardation? Harvey N. Switzky, Stephen Greenspan, 2006 What is Mental Retardation is a rare peek into the divergent and at times contentious points of view among the world's leading researchers on what the condition of mental retardation is and how it should be defined measured and implemented in the 21st century This candid and insightful collection of 21 essays features expert opinion on issues ranging from whether mental retardation really is a slowing of mental development and what the disability should be called to how cultural norms affect the definition of the condition worldwide and lessons learned from the Atkins v Virginia case The definitions of mental retardation published from 1921 2002 by the American Association on Intellectual and Developmental Disabilities provide the backdrop for this powerful discussion
