- Suppose the radius of a spherical balloon is shrinking at $\frac{1}{2} \frac{\text{cm}}{\text{min}}$. How fast is the volume decreasing when the radius is 4 cm? ($V = \frac{4}{3} \pi r^3$)
- Water leaking onto a floor creates a circular pool with an area that increases at the rate of 3 cm^2 per minute. How fast is the radius of the pool increasing when the radius is 10 cm?
- A point moves around the circle $x^2 + y^2 = 9$. When the point is at $(-\sqrt{3}, \sqrt{6})$, its x-coordinate is increasing at the rate of 20 units per second. How fast is its y-coordinate changing at that instant?
- A ladder 15 ft long leans against a vertical wall. Suppose that when the bottom of the ladder is x feet from the wall, the bottom is being pushed toward the wall at the rate of $\frac{1}{2}x$ feet per second. How fast is the top of the ladder rising at the moment the bottom is 5 feet from the wall?
- A water trough is 12 feet long, and its cross section is an equilateral triangle with sides 2 feet long. Water is pumped into the trough at a rate of 3 cubic feet per minute. How fast is the water level rising when the depth of the water is .5 ft?
- A beacon on a lighthouse 1 mile from shore revolves at the rate of 10π radians per minute. Assuming that the shoreline is straight, calculate the speed at which the spotlight is sweeping across the shoreline as it lights up the sand 2 miles from the lighthouse. (Hint: In the figure below, x is the coordinate of the point on the shore at which the light shines. Thus $\frac{d}{dt}x$ is the speed of the image of the spotlight moving across the shoreline, and $\frac{d}{dt}\theta = 10\pi$.)

- The tortoise and the hare are having their fabled footrace, each moving along a straight line. The tortoise, moving at a constant rate of 10 feet per minute, is 4 feet from the finish line when the hare wakes up 5001 feet from the finish line and darts off after the tortoise. Let x be the distance from the tortoise to the finish line, and suppose the distance y from the hare to the finish line is given by $y = 5001 - 2500\sqrt{4 - x}$.
 - How fast is the hare moving when the tortoise is 3 feet from the finish line?
 - Who wins? By how many feet?

domestic violence from both sides of the fence edition #2 John Hayes, 2008-02-28 this is a book edited by John Hayes he has researched this subject over a year it is larger than a paper for a doctorate *Culture and Economics* Eelke de Jong, 2013-09-13 Since the early 1990s culture in the sense of norms and values has entered economic analysis again whereas it was totally absent from mainstream economics during most of the second half of the twentieth century The disappointing

results of mainstream economics and developments in the world economy triggered an awareness of the relevance of the context in which people make decisions. Developments which were triggering this were the unexpected high growth rates in Asia, the Asian miracle, the transition of previously centrally planned economies, and the increased attention for the role of religion after 9/11/2001. Some of the areas this research covers are: The history of culture in economics from Adam Smith to the present; The way culture is incorporated into economic analysis; Methods used in empirical analysis on culture and economics; Culture as an explanatory factor of cross country difference in institutions and performance; Culture appears to be relevant for explaining differences between otherwise similar countries in particular OECD countries; Uncertainty avoidance for example significantly explains the relative importance of financial markets. This book is the first that provides an overview of the field of culture and economics and will be of use to postgraduate researchers in the field of economics and culture.
