Janes,R. Stall,S.M. Gifford,2012-12-06 Over the past two decades increasing interest has emerged in the contributions that the social sciences might make to the epidemiological study of patterns of health and disease Several reasons can be cited for this increasing interest Primary among these has

been the rise of the chronic non infectious diseases as important causes of morbidity and mortality within Western populations during the 20th century Generally speaking the chronic non infectious diseases are strongly influenced by lifestyle variables which are themselves strongly influenced by social and cultural forces The understanding of the effects of the behavioral factors in say hypertension thus requires an understanding of the social and cultural factors which encourage obesity a sedentary lifestyle non compliance with anti hypertensive medications or other prescribed regimens and stress Equally there is a growing awareness that considerations of human behavior and its social and cultural determinants are important for understanding the distribution and control of infectious diseases Related to this expansion of epidemiologic interest into the behavioral realm has been the development of etiological models which focus on the psychological biological and socio cultural characteristics of hosts rather than exclusive concern with exposure to a particular agent or even behavioral risk Also during this period advances in statistical and computing techniques have made accessible the ready testing of multivariate causal models and so have encouraged the measurement of the effects of social and cultural factors on disease occurrence

Literary Anthropology Fernando Poyatos, 1988 The traditional gulf between the theory and practice of literature and the various areas subjoined under anthropology has hindered the development of some very fruitful perspectives in the realm of poetics and the general theory of literature particularly in its narrative forms Poyatos initial idea of literary anthropology as the study of people and their cultural manifestations through their national literatures without doubt the richest source of documentation of human life styles and the most advanced form of our projection in time and space and of communicating with contemporary and future generations has been enriched by the thoughts of a multi cultural group of scholars from both anthropology and literature who at a first symposium on the subject attempted to define this area leaving the way open to many more research possibilities

Anthropological Research John J. Poggie Jr., Billie R. DeWalt, William W. Dressler, 1992-07-01 The authors of this book share a common assumption about anthropology that replicable and systematic procedures of data collection and analysis are essential requirements for building useful cultural theory They view cultural theory as both an aid to understanding sociocultural phenomena and as an aid in changing existing social conditions This book focuses on five specific themes representing a set of principles for conducting research the importance of intra cultural variation the blending of qualitative and quantitative approaches the search for micro macro levels of generalization the innovative matching of methodology to research problems and the practical or applied merit of systematically generated and evaluated theory It contributes to scientific anthropology and shows that the credibility and utility of anthropological research in policy matters is enhanced by scientific research methodology
