Course Description

Advanced Placement (AP) Biology is designed to be the equivalent of a year-long freshman-level collegiate general biology course. The topics and course content follow the AP Biology curriculum framework as outlined by the College Board. Students are given the opportunity to take the AP Biology exam administered in May upon completion of the course. If you would like more information about AP Biology and the Advanced Placement program, please contact me or go to the College Board web site at www.collegeboard.com.

AP Biology students will not only learn fascinating general biology content, but they will also experience science as a process by:

- conducting their own inquiry laboratory experiments
- investigating advanced topics through current scientific and trade journal articles
- participating in ethical, social and environmental issue discussions

Students can expect challenging content, a rigorous pace, extensive lab work, a significant time-commitment to studying and reading outside of class, and many rewards for putting in all of the effort it takes to be successful in AP Biology. **To be successful, students must take responsibility for their own learning.**

Course Objectives and Goals: Students will...

- 1) Gain an appreciation for the biological sciences and connect the Big Ideas and unifying themes of biology.
- 2) Understand that science is a process and experience scientific inquiry by conducting experiments to characterize cause and effect relationships and processes.
- 3) Be able to think critically and make informed decisions about personal, ethical, environmental, and social issues regarding science and technology; and,
- 4) Gain academic maturity and confidence in their learning skills.

AP Biology at Blaine High School is an "open-door" course. This means that anyone can register for it. However, a year of Chemistry is very helpful for preparing students to be successful. In addition to science preparation, students in AP Biology should have a strong math background, including algebra and geometry. Students should also be self-motivated and willing to work hard for success.

Text and Print Resources:

Curriculum Framework: The revised AP Biology course has shifted from a traditional "content coverage" model of instruction to one that focuses on enduring, conceptual understandings and the content that supports them. This approach will enable students to spend less time on factual recall and more time on inquiry-based learning of essential concepts as they develop the reasoning skills necessary to engage in the science practices used throughout their study of AP Biology. Students who take an AP Biology course designed using this curriculum framework as its foundation will also develop advanced inquiry and reasoning skills, such as designing a plan for collecting data, analyzing data, applying mathematical routines, and connecting concepts in and across domains. The result will be readiness for the study of advanced topics in subsequent college courses — a goal of every AP course.

The key concepts and related content that define the revised AP Biology course and exam are organized around the big ideas, listed below, which encompass the core scientific principles, theories and processes governing living organisms and biological systems. For each of the big ideas, enduring understandings, which incorporate the core concepts that students should retain from the learning experience, are also identified. Each enduring understanding is followed by statements of the *essential knowledge* necessary to support it. Unless otherwise specified, all of the details in the outline are required elements of the course and may be included on the AP Biology Exam.

- **Big Idea 1:** The process of evolution drives the diversity and unity of life.
- **Big Idea 2:** Biological systems utilize free energy and molecular building blocks to grow, to reproduce and to maintain dynamic homeostasis.
