1. Study this figure of Stanley Miller's experiment to simulate conditions thought to have existed on the early Earth. Explain the elements of this experiment, using arrows to indicate what occurs in various parts of the apparatus.

2. What was collected in the sample for chemical analysis? What was concluded from the results of this experiment? *There were a variety of organic molecules that are common in organisms (hydrocarbons, amino acids, CH₂O, CH₄ and a more)*
concluded that organic molecules may have been synthesized abiotically on the Earth

Concept 4.2 Carbon atoms can form diverse molecules by bonding to four other atoms

3. Make an electron distribution diagram of carbon. It is essential that you know the answers to these questions:

- a. How many valence electrons does carbon have? *4!!!*
- b. How many bonds can carbon form? *4!!! up to 4*
- b. What type of bonds does it form with other elements?

covalent bonds

4. Carbon chains form skeletons. List here the types of skeletons that can be formed.

- 1.) length
- 2.) presence of rings
- 3.) branching
- 4.) double bond position

5. What is a hydrocarbon? Name two. Are hydrocarbons hydrophobic or hydrophilic?

Protein Interaction Networks in Health and Disease Spyros Petrakis, Miguel A. Andrade-Navarro, 2016-10-19 The identification and mapping of protein protein interactions PPIs is a major goal in systems biology Experimental data are currently produced in large scale using a variety of high throughput assays in yeast or mammalian systems Analysis of these data using computational tools leads to the construction of large protein interaction networks which help researchers identify novel protein functions However our current view of protein interaction networks is still limited and there is an active field of research trying to further develop this concept to include important processes the topology of interactions and their changes in real time the effects of competition for binding to the same protein region PPI variation due to alternative splicing or post translational modifications etc In particular a clinically relevant topic for development of the concept of protein interactions networks is the consideration of mutant isoforms which may be responsible for a pathological condition Mutations in proteins may result in loss of normal interactions and appearance of novel abnormal interactions that may affect a protein s function and biological cycle This Research Topic presents novel findings and recent achievements in the field of protein interaction networks with a focus on disease Authors describe methods for the identification and quantification of PPIs the annotation and analysis of networks considering PPIs and protein complexes formed by mutant proteins associated with pathological conditions or genetic diseases
