2006 SCORING GUIDELINES**

Question 2

According to fossil records and recent published observations, two species of leaf-eating beetles (species A and B) have existed on an isolated island in the Pacific Ocean for over 100,000 years. In 1964 a third species of leaf-eating beetle (species C) was accidentally introduced on the island. The population size of each species has been regularly monitored as shown in the graph above.

(a) **Propose** an explanation for the pattern of population density observed in species C. **[3 points]**

1. Description of curve [1 point]: Type of growth is exponential growth (logarithmic or J-shaped curve acceptable).
2. Explanation must describe the growth using an understanding of [1 point each, 2 points maximum]:
 - Lack of limiting factors
 - Low competition
 - Abundant food
 - Low predation
 - Ideal environmental conditions (habitat, temperature, moisture, etc.)
 - Access to mates

(b) **Describe** the effect that the introduction of beetle species C has had on the population density of species A and species B. **Propose** an explanation for the patterns of population density observed in species A and in species B. **[4 points]**

1. Describe effect [1 point]: Species C has had little or **no effect** on species A; however, as **species C increases, B decreases. Both lines must be addressed for the point.**
2. Explanation for species A or dashed line [1 point]: **No or little competition** (No niche overlap).
3. Explanation for species B or solid line [1 point]: **Competition or Niche overlap**.
4. Identification of the niche "**Competitive Exclusion Principle**" [1 point]: by name or description.

(c) **Predict** the population density of species C in 2014. Provide a biological **explanation** for your prediction. **[2 points]**

1. Prediction [1 point]: The population will **increase, decrease, or stabilize (level off)**.
2. Explanation [1 point]: Tie a correct explanation to the prediction.
 - Increase**—tie to abundant resources and freedom from competition.
 - Decrease**—tie to exhaustion of a key resource or density-dependent cause.
 - Stabilize or level off**—tie to carrying capacity or a limiting resource.

(d) **Explain** why invasive species are often successful in colonizing new habitats.

[2 points—from either or both areas below]

1. They have **lost a controlling population factor** from their original habitat: predator, pathogen, or parasite.
2. They **have a novel evolutionary advantage** brought to the island from their original habitat: an aspect that provides an advantage—a chemical defense, flight advantage, novel enzyme, etc.

Ap Biology 2006 Scoring Guidelines:

Developing Assessments for the Next Generation Science Standards National Research Council, Division of Behavioral and Social Sciences and Education, Board on Science Education, Board on Testing and Assessment, Committee on Developing Assessments of Science Proficiency in K-12, 2014-05-29 Assessments understood as tools for tracking what and how well students have learned play a critical role in the classroom. *Developing Assessments for the Next Generation Science Standards* develops an approach to science assessment to meet the vision of science education for the future as it has been elaborated in *A Framework for K-12 Science Education* and *Next Generation Science Standards*. NGSS. These documents are brand new and the changes they call for are barely under way but the new assessments will be needed as soon as states and districts begin the process of implementing the NGSS and changing their approach to science education. The new Framework and the NGSS are designed to guide educators in significantly altering the way K-12 science is taught. The Framework is aimed at making science education more closely resemble the way scientists actually work and think and making instruction reflect research on learning that demonstrates the importance of building coherent understandings over time. It structures science education around three dimensions: the practices through which scientists and engineers do their work, the key crosscutting concepts that cut across disciplines, and the core ideas of the disciplines, and argues that they should be interwoven in every aspect of science education, building in sophistication as students progress through grades K-12. *Developing Assessments for the Next Generation Science Standards* recommends strategies for developing assessments that yield valid measures of student proficiency in science as described in the new Framework. This report reviews recent and current work in science assessment to determine which aspects of the Framework's vision can be assessed with available techniques and what additional research and development will be needed to support an assessment system that fully meets that vision. The report offers a systems approach to science assessment in which a range of assessment strategies are designed to answer different kinds of questions with appropriate degrees of specificity and provide results that complement one another. *Developing Assessments for the Next Generation Science Standards* makes the case that a science assessment system that meets the Framework's vision should consist of assessments designed to support classroom instruction, assessments designed to monitor science learning on a broader scale, and indicators designed to track opportunity to learn. New standards for science education make clear that new modes of assessment designed to measure the integrated learning they promote are essential. The recommendations of this report will be key to making sure that the dramatic changes in curriculum and instruction signaled by the Framework and the NGSS reduce inequities in science education and raise the level of science education for all students.

Handbook of College Science Teaching Joel J. Mintzes, 2006. The Handbook offers models of teaching and learning that go beyond the typical lecture-laboratory format and provides rationales for new practices in the college classroom. It is ideal for graduate teaching assistants, senior faculty, and graduate coordinators and
