software delivers significant value to technical computing clients who are in need of cost effective highly scalable and robust solutions First the book provides a high level overview of the HPC solution including all of the components that makes the HPC cluster IBM Power System S822LC 8335 GTB software components interconnect switches and the IBM Spectrum™ Scale parallel file system Then the publication is divided in three parts Part 1 focuses on the developers Part 2 focuses on the administrators and Part 3 focuses on the evaluators and planners of the solution The IBM Redbooks publication is targeted toward technical professionals consultants technical support staff IT Architects and IT Specialists who are responsible for delivering cost effective HPC solutions that help uncover insights from vast amounts of client s data so they can optimize business results product development and scientific discoveries

The Greatest Inventions Ever Jaideep

Gupte,2025-07-30 Everyday billions of people wake up on planet Earth pick up their toothbrush use a kettle run through their smartphone sit in a train bus car and head for work college school They may use a desktop laptop tablet and return home at the end of the day Some may watch some television others just grab dinner and crash out only to repeat this cycle over and over day after day The routine gets so mechanical that only a tiny fraction ever wonder how the things they used during the day were conceived in the first place Very few of these billions realize that all the little conveniences they took for granted during the day are a result of eons of deep cognitive processes and scores of trial and error methods The masterminds behind these stunningly creative works have long remained as some far flung and unsung heroes but it is they who have made our lives as smooth as butter and as soft as velvet This book dives into the origin of all these little conveniences called Inventions the stories and minds behind them Starting with the Stone Age and spanning numerous civilizations and countries the book looks into all the defining things that have been invented so far how they work and what could be invented in the future It also takes a peek into how Inventions have shaped the relationship between countries and civilizations how they rose and fell across various civilizations and why some countries have been consistently better at inventing than other countries The book aims to ignite the spark of curiosity among the readers at the same time helping the reader appreciate the ingenuity of these unsung heroes who lie forgotten on some dusty and nondescript shelves across various libraries Without them we would still be cavemen today living out our lives like hunter gatherers

Foundation, Architecture, and Prototyping of Humanized AI Mark Chang,2023-07-31 Humanized AI HAI emerging as the next of the AI waves refers to artificial social beings that are very close to humans in various aspects beings who are machine race humans not digital slaves Foundation Architecture and Prototyping of HAI deploy a novel smalldata approach to vertically explore the spectrum of HAI Different from the popular big data philosophy that is based on the rigid notion that the connotation of each concept is fixed and the same to everyone this book treats understanding as a process from simple to complex and uses the similarity principle to effectively deal with novelties Combining the efficiency of the Behaviorists goal driven approach and the flexibility of a Constructivists approach both the architecture of HAI and the philosophical discussions arising from it are elaborated upon Advancing a unique approach to the concept of HAI this book appeals to professors and students of both AI and philosophy as well as industry professionals looking to stay at the forefront of developments within the field **Deep Learning Techniques Applied to Affective Computing** Zhen Cui,Wenming Zheng,2023-06-14 Affective computing refers to computing that relates to arises from or influences emotions The goal of affective computing is to bridge the gap between humans and machines and ultimately endow machines with emotional intelligence for improving natural human machine interaction In the context of human robot interaction HRI it is hoped that robots can be endowed with human like capabilities of observation interpretation and emotional expression The research on

affective computing has recently achieved extensive progress with many fields contributing including neuroscience psychology education medicine behavior sociology and computer science Current research in affective computing concentrates on estimating human emotions through different forms of signals such as speech face text EEG fMRI and many others In neuroscience the neural mechanisms of emotion are explored by combining neuroscience with the psychological study of personality emotion and mood In psychology and philosophy emotion typically includes a subjective conscious experience characterized primarily by psychophysiological expressions biological reactions and mental states The multi disciplinary features of understanding emotion result in the fact that inferring the emotion of humans is definitely difficult As a result a multi disciplinary approach is required to facilitate the development of affective computing One of the challenging problems in affective computing is the affective gap i e the inconsistency between the extracted feature representations and subjective emotions To bridge the affective gap various hand crafted features have been widely employed to characterize subjective emotions However these hand crafted features are usually low level and they may hence not be discriminative enough to depict subjective emotions To address this issue the recently emerged deep learning also called deep neural networks techniques provide a possible solution Due to the used multi layer network structure deep learning techniques are capable of learning high level contributing features from a large dataset and have exhibited excellent performance in multiple application domains such as computer vision signal processing natural language processing human computer interaction and so on The goal of this Research Topic is to gather novel contributions on deep learning techniques applied to affective computing across the diverse fields of psychology machine learning neuroscience education behavior sociology and computer science to converge with those active in other research areas such as speech emotion recognition facial expression recognition Electroencephalogram EEG based emotion estimation human physiological signal heart rate estimation affective human robot interaction multimodal affective computing etc We welcome researchers to contribute their original papers as well as review articles to provide works regarding the neural approach from computation to affective computing systems This Research Topic aims to bring together research including but not limited to Deep learning architectures and algorithms for affective computing tasks such as emotion recognition from speech face text EEG fMRI and many others Explainability of deep Learning algorithms for affective computing Multi task learning techniques for emotion personality and depression detection etc Novel datasets for affective computing Applications of affective computing in robots such as emotion aware human robot interaction and social robots etc

Proceedings of the 17th European Conference on Game-Based Learning
Ton Spil, Guido Bruinsma, Luuk Collou, 2023-10-05 These proceedings represent the work of contributors to the 24th European Conference on Knowledge Management ECKM 2023 hosted by Iscte Instituto Universit rio de Lisboa Portugal on 7 8 September 2023 The Conference Chair is Prof Florinda Matos and the Programme Chair is Prof lvaro Rosa both from Iscte Business School Iscte Instituto Universit rio de Lisboa Portugal ECKM is now a well established event on the academic

research calendar and now in its 24th year the key aim remains the opportunity for participants to share ideas and meet the people who hold them The scope of papers will ensure an interesting two days The subjects covered illustrate the wide range of topics that fall into this important and ever growing area of research The opening keynote presentation is given by Professor Leif Edvinsson on the topic of Intellectual Capital as a Missed Value The second day of the conference will open with an address by Professor Noboru Konno from Tama Graduate School and Keio University Japan who will talk about Society 5.0 Knowledge and Conceptual Capability and Professor Jay Liebowitz who will talk about Digital Transformation for the University of the Future With an initial submission of 350 abstracts after the double blind peer review process there are 184 Academic research papers 11 PhD research papers 1 Masters Research paper 4 Non Academic papers and 11 work in progress papers published in these Conference Proceedings These papers represent research from Australia Austria Brazil Bulgaria Canada Chile China Colombia Cyprus Czech Republic Denmark Finland France Germany Greece Hungary India Iran Iraq Ireland Israel Italy Japan Jordan Kazakhstan Kuwait Latvia Lithuania Malaysia Mexico Morocco Netherlands Norway Palestine Peru Philippines Poland Portugal Romania South Africa Spain Sweden Switzerland Taiwan Thailand Tunisia UK United Arab Emirates and the USA

Smart Cities in Asia Thanh Phan, Daniela Damian, 2022-05-28 This open access book examines different aspects of smart cities including technology urban development sustainable development finance and privacy and data protection It also covers a wide range of jurisdictions in Asia Pacific Hong Kong Indonesia Malaysia Singapore Thailand and Vietnam The book consists of two main parts The first part includes general chapters that conceptualize smart cities and provide an overview of these cities problems such as privacy and data protection concern The general chapters also discuss the role of public and private sectors in developing and governing smart cities The second part encompasses country specific chapters that examine the concepts addressed in the general chapters in practice by analyzing several specific smart city projects This book provides researchers and practitioners with some knowledge of a smart city and its implication in the Asia context The book is designed with some general chapters updating the literature on smart cities for readers who are interested in an overview of this concept Audiences who are curious about how smart cities are perceived and implemented in some Asian jurisdictions are benefited from country specific chapters The book is also helpful to general audiences whose interests lay at the intersection of law governance and technology

3D Game Textures Luke Ahearn, 2014-08-01 A broadly enhanced new edition of Luke Ahearn's cornerstone game art book 3D Game Textures is here When digital art software was in its infancy most digital art especially vector art was textureless With the advance in software it is now possible to incorporate texture into most types of digital art However if the artists cannot build their own textures they are limited to using commercial textures In this enhanced 3rd edition of Luke Ahearn's gem of a book not only does Luke teach you how to create your own unique textures he also teaches how to create shaders the visual effects reflections refractions opacity that make textures come to life and materials collections of shaders that fill well together to map to a particular scene or environment You can now expand your skill set immeasurably and create more compelling varied art work from scratch Unlike anything on the market this book provides an in depth guide to game textures shaders and materials with hundreds of high quality examples The companion website includes demo versions of relevant software resource images all images from the book

Towards a New Cognitive Neuroscience: Modeling Natural Brain Dynamics Klaus Gramann, Tzyy-Ping Jung, Daniel P. Ferris, Chin-Teng Lin, Scott Makeig, 2014-10-03 Decades of brain imaging experiments have revealed important insights into the architecture of the human brain and the detailed anatomic basis for the neural dynamics supporting human cognition However technical restrictions of traditional brain imaging approaches including functional magnetic resonance tomography fMRI positron emission tomography PET and magnetoencephalography MEG severely limit participants movements during experiments As a consequence our knowledge of the neural basis of human cognition is rooted in a dissociation of human cognition from what is arguably its foremost and certainly its evolutionarily most determinant function organizing our behavior so as to optimize its consequences in our complex multi scale and ever changing environment The concept of natural cognition therefore should not be separated from our fundamental experience and role as embodied agents acting in a complex partly unpredictable world To gain new insights into the brain dynamics supporting natural cognition we must overcome

restrictions of traditional brain imaging technology First the sensors used must be lightweight and mobile to allow monitoring of brain activity during free participant movements New hardware technology for electroencephalography EEG and near infrared spectroscopy NIRS allows recording electrical and hemodynamic brain activity while participants are freely moving New data driven analysis approaches must allow separation of signals arriving at the sensors from the brain and from non brain sources neck muscles eyes heart the electrical environment etc Independent component analysis ICA and related blind source separation methods allow separation of brain activity from non brain activity from data recorded during experimental paradigms that stimulate natural cognition Imaging the precisely timed distributed brain dynamics that support all forms of our motivated actions and interactions in both laboratory and real world settings requires new modes of data capture and of data processing Synchronously recording participants motor behavior brain activity and other physiology as well as their physical environment and external events may be termed mobile brain body imaging MoBI Joint multi stream analysis of recorded MoBI data is a major conceptual mathematical and data processing challenge This Research Topic is one result of the first international MoBI meeting in Delmenhorst Germany in September 2013 During an intense workshop researchers from all over the world presented their projects and discussed new technological developments and challenges of this new imaging approach Several of the presentations are compiled in this Research Topic that we hope may inspire new research using the MoBI paradigm to investigate natural cognition by recording and analyzing the brain dynamics and behavior of participants performing a wide range of naturally motivated actions and interactions

Beyond audiovisual: novel multisensory stimulation techniques and their applications Justyna Świdrak, Grzegorz Pochwatko, Orestis Georgiou, Sofia Seinfeld, Marta Matamala-Gomez, 2024-10-03 Immersive virtual reality technology has been developing extremely dynamically in the last decade One of the reasons is the impressive progress in 3D graphics and the increasing accessibility of hardware with sufficient computational power to smoothly render high quality 3D environments Virtual reality overwhelms the user by replacing the physical world with a computer generated 3D scenario Its power lies in embodied complex and vivid scenarios rich in context and dynamic engagement of the sensorimotor system which provokes more naturalistic behavioural and physiological responses than abstract stimuli Congruent multisensory stimulation builds virtual experience and makes us forget about the real world Strong presence and embodiment illusions can cause deep cognitive affective and behavioural changes leading to enhanced learning perspective taking and treatments Some types of sensory input have received much more attention than others This includes mainly visual and auditory cues but also to some extent nociception and touch However the human sensory system is much richer and more complex and includes many other senses such as smell and taste but also thermoception interoception equilibrioception and others Most VR experiences are built on rich audiovisual cues since these two modalities allow us to perceive the virtual world and interact with it For example touch although extremely important is often represented in a reductionist form and other modalities such as the sense of smell or

thermoception are completely ignored The Metaverse Matthew Ball, 2024-07-23 From the leading theorist of the Metaverse comes the eagerly anticipated revised and updated account of the next internet what the Metaverse is what it will take to build it and what it means for all of us A Hudson Booksellers Amazon Guardian Financial Times Economist and ByteDance Toutiao Best Book of the Year In this substantially revised and updated edition of his internationally best selling book pioneering theorist and entrepreneur Matthew Ball goes beyond the hype cycle to present a definitive account of the future of the internet The Metaverse according to Ball s industry shaping definition is a persistent and interconnected network of 3D virtual worlds that will eventually serve as the gateway to most online experiences and underpin much of the physical world As Ball recounts the Metaverse is a thirty year old term and the core ideas and technologies behind it have been in development for nearly a century Only recently however did this fantastical concept begin to leap from the pages of science fiction and depths of national research labs to the forefront of consumer technology industrial engineering healthcare education dating and more From the history of video games and virtual reality to proto metaverses such as Second Life Fortnite and Roblox to Generative AI and the groundbreaking films and television series of the Walt Disney Company Ball points out that the Metaverse is already emerging around us and doesn t require a headset Still there are many breakthroughs required to fully realize the Metaverse and he describes each in approachable but expert detail Ball also lays out how governmental policy the philosophy of Big Tech leaders artificial general intelligence economics and human rights will shape the development of the Metaverse Famous for his ability to bring clarity to complex and misunderstood topics Ball demonstrates that the race to build the Metaverse also known as the spatial or immersive internet is only accelerating The Metaverse will endure as an indispensable guide for enthusiasts tech aficionados and anyone curious about the profound transformations underway in our increasingly interconnected world
