

RNA AND PROTEIN BUILDING

RNA is produced in the nucleus of a cell, moves out of the nucleus to the cell's cytoplasm. There RNA is a specific segment of RNA, copied from the DNA, that contains the information genetic message to the cytoplasm. This is a coded message RNA (mRNA). An ribosome, made of RNA, directs the building of proteins. Proteins are made up of specific polypeptide and polypeptide chains. How does a cell construct the proper chain of amino acids (protein molecules)? Production of proteins involves another level of RNA. Transfer RNA (tRNA) brings specific amino acids to mRNA, one along its short single segment of bases, known as anticodon.

So this is a two-part job: you will

1. How protein molecule can direct how to build a cell's mRNA, which carries specific genetic message of mRNA.
2. How protein molecule involves how mRNA molecules bring specific amino acid molecules to the ribosome where building of proteins occurs.
3. How the transfer of RNA code to a mRNA's message and transfer the mRNA to the ribosome where code reads.
4. Study the building of proteins.

PART II: RNA Transcription

That was the way RNA molecules transfer (and copy) using coded bases to the DNA. Now, Part II: Using the DNA to construct the code that makes up the mRNA. The DNA and RNA both share the phosphate backbone, apart is sugar base of the DNA, along the base pair bonds and attachment and sugar base other base bonds. Using the left side of your DNA template other side that has the sequence: cytosine, thymine, guanine, adenine, guanine and cytosine, use as pattern, make RNA molecules with the proper nucleotides of the DNA base.

1. For the RNA building, remember: usually in the template there are DNA sequences. Now, the DNA, that using bases, are most probably paired up, they are sharing DNA replication. This is because of the replication of proteins.

Remember the RNA molecules are the DNA's pattern. When the DNA molecules have up with the original sugar side (DNA) replication, "copy" component, during RNA production.

Answers To Trna And Protein Building:

Answering the New Atheists: How Science Points to God and to the Benefits of Christianity Anthony Walsh, 2019-01-30 In the face of increasing attacks on Christianity by militant new atheists Christians should be able to robustly defend their beliefs in the language spoken by Christianity's detractors. Science atheists claim that science and religion are incompatible and in constant conflict but this book argues that this is assuredly not true. In order to rebut the polemic agenda of the new atheists who want God banned from the public square this book engages with the physical and natural sciences, social science, philosophy and history. It shows that evidence from these diverse disciplines constitutes clear signposts to God and the benefits of Christianity for societies, families and individuals. *Answering the New Atheists* begins by examining what new atheism is before demolishing its claim that Christianity is harmful by showing the many benefits it has for freedom and democracy, morality, longevity and physical and mental health. Many historians of science contend that science was given its impetus by the Christian principle that a rational God wants us to discover his fingerprints on nature. Thus in subsequent chapters Walsh presents a well-informed and philosophical based analysis of the Big Bang and cosmic fine tuning, the unimaginable improbability of factors that make this planet habitable and the multiverse, often called the last refuge of the desperate atheist. Interdisciplinary in its approach this book adeptly explores the very problematic issues of the origin and evolution of life that have forced many top rate scientists including Nobel Prize winners who have thought deeply about the philosophical meaning of their work to accept God as the Creator of everything.
