

Tutorial 1

1).

A company produced 300 standard bookcases last week using seven workers, and 240 standard bookcases this week using five workers. In which period was labour productivity higher? Explain.

$$\text{Week 1: } 300/7 = 42.857 \text{ SBC/Worker}$$

$$\text{Week 2: } 240/5 = 48 \text{ SBC/Worker}$$

Second week is more productive as more bookcases were produced per worker.

2).

An operation has a 10 percent scrap rate. As a result, only 82 good pieces per hour are produced. What is the potential increase in labour productivity that could be achieved by eliminating the scrap?

$$82 = x (1 - 0.1)$$

$$\frac{82}{0.9} = x = 91.1 \text{ Total pieces / Good pieces if no scrap}$$

$$\frac{91.1 - 82}{82} = 0.111 = 11.1 \%$$

Laguna,Rafael Martí,2012-12-06 The book Scatter Search by Manuel Laguna and Rafael Mart represents a long awaited missing link in the literature of evolutionary methods Scatter Search SS together with its generalized form called Path Relinking constitutes the only evolutionary approach that embraces a collection of principles from Tabu Search TS an approach popularly regarded to be divorced from evolutionary procedures The TS perspective which is responsible for introducing adaptive memory strategies into the metaheuristic literature at purposeful level beyond simple inheritance mechanisms may at first seem to be at odds with population based approaches Yet this perspective equips SS with a remarkably effective foundation for solving a wide range of practical problems The successes documented by Scatter Search come not so much from the adoption of adaptive memory in the range of ways proposed in Tabu Search except where as often happens SS is advantageously coupled with TS but from the use of strategic ideas initially proposed for exploiting adaptive memory which blend harmoniously with the structure of Scatter Search From a historical perspective the dedicated use of heuristic strategies both to guide the process of combining solutions and to enhance the quality of offspring has been heralded as a key innovation in evolutionary methods giving rise to what are sometimes called hybrid or memetic evolutionary procedures The underlying processes have been introduced into the mainstream of evolutionary methods such as genetic algorithms for example by a series of gradual steps beginning in the late 1980s
