Concurrent Engineering: Tools and Technologies for Mechanical System Design Edward J. Haug, 2012-12-06

These proceedings contain lectures presented at the NATO Advanced Study Institute on Concurrent Engineering Tools and Technologies for Mechanical System Design held in Iowa City Iowa 25 May 5 June 1992 Lectures were presented by leaders from Europe and North America in disciplines contributing to the emerging international focus on Concurrent Engineering of mechanical systems Participants in the Institute were specialists from throughout NATO in disciplines constituting Concurrent Engineering many of whom presented contributed papers during the Institute and all of whom participated actively in discussions on technical aspects of the subject The proceedings are organized into the following five parts Part 1 Basic Concepts and Methods Part 2 Application Sectors Part 3 Manufacturing Part 4 Design Sensitivity Analysis and Optimization Part 5 Virtual Prototyping and Human Factors Each of the parts is comprised of papers that present state of the art concepts and methods in fields contributing to Concurrent Engineering of mechanical systems The lead off papers in each part are based on invited lectures followed by papers based on contributed presentations made by participants in the Institute

Nuclear Power Pavel Tsvetkov, 2011-09-06 At the onset of the 21st century we are searching for reliable and sustainable energy sources that have a potential to support growing economies developing at accelerated growth rates technology advances improving quality of life and becoming available to larger and larger populations The quest for robust sustainable energy supplies meeting the above constraints leads us to the nuclear power technology Today s nuclear reactors are safe and highly efficient energy systems that offer electricity and a multitude of co generation energy products ranging from potable water to heat for industrial applications Catastrophic earthquake and tsunami events in Japan resulted in the nuclear accident that forced us to rethink our approach to nuclear safety requirements and facilitated growing interests in designs which can withstand natural disasters and avoid catastrophic consequences This book is one in a series of books on nuclear power published by InTech It consists of ten chapters on system simulations and operational aspects Our book does not aim at a complete coverage or a broad range Instead the included chapters shine light at existing challenges solutions and approaches Authors hope to share ideas and findings so that new ideas and directions can potentially be developed focusing on operational characteristics of nuclear power plants The consistent thread throughout all chapters is the system thinking approach synthesizing provided information and ideas The book targets everyone with interests in system simulations and nuclear power operational aspects as its potential readership groups students researchers and practitioners

Computer-Aided Design, Engineering, and Manufacturing Cornelius T.
