Design of UWB Radar Sensors Amnoiy Ruengwaree, 2007 **Proceedings of 3rd International Conference on Advanced Computing, Networking and Informatics** Atulya Nagar, Durga Prasad Mohapatra, Nabendu Chaki, 2015-09-03

Advanced Computing Networking and Informatics are three distinct and mutually exclusive disciplines of knowledge with no apparent sharing overlap among them. However, their convergence is observed in many real world applications including cyber security, internet banking, healthcare, sensor networks, cognitive radio, pervasive computing, amongst many others. This two volume proceedings explore the combined use of Advanced Computing and Informatics in the next generation wireless networks and security, signal and image processing, ontology and human computer interfaces, HCI. The two volumes together include 132 scholarly articles which have been accepted for presentation from over 550 submissions in the Third International Conference on Advanced Computing Networking and Informatics 2015 held in Bhubaneswar, India during June 23-25, 2015.

Today, computer science, engineering, and telecommunications are two important areas linked and even inseparable. This is obvious for the user who connects the modem of his computer on his mobile phone or telephone line to access via the global data network the information available on the servers. The both domains are evolving rapidly and the development of new architectures of systems dedicated to telecommunications and computing becomes essential. Especially, wireless transmission systems with high data rate. Two parts of these systems should be developed: software and hardware. Another area that is renewable energies becomes more attractive for researchers in order to develop new conversion systems with good performances and a good optimization of energy. For example, in wireless sensor systems, we try to develop new protocols permitting to have a good autonomy in terms of energy.
