Antidiabetic Activity Of Medicinal Plants From Cholistan Desert:

Antidiabetic Activity Of Medicinal Plants From Cholistan Desert Mahmood Ahmad, Tahira Shamim, Laila Sumreen, 2014-11-25 Diabetes mellitus is a complex metabolic syndrome with wide spread derangements in the metabolism of carbohydrates lipids and proteins and is associated with chronic hyperglycemia the common outcome in all types of diabetes. Currently diabetes is assuming to be an epidemic and rated among the five leading causes of morbidity and mortality. Medicinal plants have long history of medicinal use and still are in use among different folks. Current study was conducted to evaluate the antidiabetic effects of traditional antidiabetic plants *Acacia nilotica*, *Azadirachta indica* and *Euphorbia prostrata* in diabetic rabbits. Alloxan at the dose of 150 mg/kg body weight was administered intraperitoneally to induce diabetes. Methanolic extracts of these plants were prepared and were orally administered to diabetic rabbits once daily for 14 days at the doses of 250 mg/kg and 500 mg/kg body weight. Decrease in fasting blood glucose levels produced by methanolic extract of these plants was compared with standard drug Glibenclamide 5 mg/kg. Serum cholesterol and triglyceride levels of diabetic rabbits were also evaluated at the end of study. Plant and Human Health, Volume 1 Munir Ozturk, Khalid Rehman Hakeem, 2018-10-02 Early anthropological evidence for plant use as medicine is 60 000 years old as reported from the Neanderthal grave in Iraq. The importance of plants as medicine is further supported by archeological evidence from Asia and the Middle East. Today around 1.4 billion people in South Asia alone have no access to modern health care and rely instead on traditional medicine to alleviate various symptoms. On a global basis approximately 50 to 80 thousand plant species are used either natively or as pharmaceutical derivatives for life threatening conditions that include diabetes, hypertension and cancers. As the demand for plant based medicine rises there is an unmet need to investigate the quality, safety and efficacy of these herbals by the scientific methods. Current research on drug discovery from medicinal plants involves a multifaceted approach combining botanical, phytochemical, analytical and molecular techniques. For instance, high throughput robotic screens have been developed by industry; it is now possible to carry out 50 000 tests per day in the search for compounds which act on a key enzyme or a subset of receptors. This and other bioassays thus offer hope that one may eventually identify compounds for treating a variety of diseases or conditions. However, drug development from natural products is not without its problems. Frequent challenges encountered include the procurement of raw materials, the selection and implementation of appropriate high throughput bioassays and the scaling up of preparative procedures. Research scientists should therefore arm themselves with the right tools and knowledge in order to harness the vast potentials of plant based therapeutics. The main objective of Plant and Human Health is to serve as a comprehensive guide for this endeavor. Volume 1 highlights how humans from specific areas or cultures use indigenous plants. Despite technological developments, herbal drugs still occupy a preferential place in a majority of the population in the third world and have slowly taken roots as alternative medicine in the West. The integration of modern science with traditional uses of herbal drugs is important for our understanding of this.

ethnobotanical relationship Volume 2 deals with the phytochemical and molecular characterization of herbal medicine Specifically it focuess on the secondary metabolic compounds which afford protection against diseases Lastly Volume 3 discusses the physiological mechanisms by which the active ingredients of medicinal plants serve to improve human health Together this three volume collection intends to bridge the gap for herbalists traditional and modern medical practitioners and students and researchers in botany and horticulture
