The Tight Junction and Its Proteins: More Than Just a Barrier Michael Fromm, Susanne M. Krug, 2020-11-20 For a long time the tight junction TJ was known to form and regulate the paracellular barrier between epithelia and endothelial cell sheets Starting shortly after the discovery of the proteins forming the TJ mainly the two families of claudins and TAMPs several other functions have been discovered a striking one being the surprising finding that some claudins form paracellular channels for small ions and or water This Special Issue includes 43 articles covering numerous dedicated topics including pathogens affecting the TJ barrier TJ regulation via immune cells the TJ as a therapeutic target TJ and cell polarity function and regulation by proteins of the tricellular TJ TJ as a regulator of cellular processes organ and tissue specific functions TJ as sensors and reacting to environmental conditions and last but not least TJ proteins and cancer Marketing Information Guide ,1969

Maroney, Stefano Ciurli, 2020-06-16 The chemistry of nickel in biological systems has been intensely investigated since the discovery of the essential role played by this transition metal in the enzyme urease ca 1975 Since then several nickel dependent enzymes have been discovered and characterized at the molecular level using structural spectroscopic and kinetic methods and insight into reaction mechanisms has been elaborated using synthetic and computational models The dual role of nickel as both an essential nutrient and as a toxin has prompted efforts to understand the molecular mechanisms of nickel toxicology and to uncover the means by which cells select nickel from among a pool of different and more readily available metal ions and thus regulate the intracellular chemistry of nickel This latter effort highlights the importance of proteins involved in the extra and intra cellular sensing of nickel the roles of nickel selective proteins for import and export and nickel responsive transcription factors all of which are important for regulating nickel homeostasis In this Special Issue the

contributing authors have covered recent advances in many of these aspects of nickel biochemistry including toxicology bacterial pathogenesis carcinogenesis computational and synthetic models nickel trafficking proteins and enzymology

Ivan Fernandez-Corbaton,2020-12-10 Symmetry is one of the most general concepts in physics Symmetry arguments are used to explain and predict observations at all length scales from elementary particles to cosmology The generality of symmetry arguments combined with their simplicity makes them a powerful tool for both fundamental and applied investigations In electrodynamics one of the symmetries is the invariance of the equations under exchange of electric and magnetic quantities The continuous version of this symmetry is most commonly known as electromagnetic duality symmetry This concept has been accepted for more than a century and throughout this time has influenced other areas of physics like high energy physics and gravitation This Special Issue is devoted to electromagnetic duality symmetry and other varieties of dualities in physics It contains four Articles one Review and one Perspective The context of the contributions ranges from string theory to applied nanophotonics which as anticipated shows that duality symmetries in general and electromagnetic duality symmetry in particular are useful in a wide variety of physics fields both theoretical and applied Moreover a number of the contributions show how the use of symmetry arguments and the quantification of symmetry breaking can successfully guide our theoretical understanding and provide us with guidelines for system design **American Machinist** ,1895
