Business Periodicals Index ,2009 **Johnstone Triangle** Norman Reid,2021-01-18 Chemistry is often seen as a difficult subject to understand This book focusses on the triangle model that Alex H Johnstone developed in the early 1980s Originally conceived in the context of making chemistry more accessible to a wider range of learners the model has been applied in almost every area of education in chemistry at all stages of learning In looking at why chemistry is difficult there are two central questions Firstly does the problem relate to the nature of chemistry and secondly does it relate to the way humans gain understanding Both were found to be important

and the answers to the two questions were found to be connected. The triangle model arose from sustained research into human learning. The central finding from research is the critical role of working memory and the model rationalises so much evidence from chemistry education research as well as the repeated experiences of teachers of chemistry at all levels. In order to understand chemistry it is essential to develop sound mental models of molecular reality. It generates major implications for the way a chemistry curriculum should be constructed and the processes of teaching and learning in chemistry when the goal is focussed on understanding the key ideas. Some of these implications are developed and pointers offered to more successful ways forward. The power of the Johnstone Triangle lies in the way it offers clear directions for all involved in chemistry education. It is hoped that this book will prove helpful to all involved in sharing the exciting story of the way humans have come to understand the molecular world, one of the great examples of great human endeavour. Protein Interactions

Jianfeng Cai, Rongsheng Wang, 2012-03-16 Protein interactions which include interactions between proteins and other biomolecules are essential to all aspects of biological processes such as cell growth, differentiation and apoptosis. Therefore investigation and modulation of protein interactions are of significance as it not only reveals the mechanism governing cellular activity but also leads to potential agents for the treatment of various diseases. The objective of this book is to highlight some of the latest approaches in the study of protein interactions including modulation of protein interactions, development of analytical techniques etc. Collectively they demonstrate the importance and the possibility for the further investigation and modulation of protein interactions as technology is evolving. **Renewable Resources for Surface**

Coatings, Inks and Adhesives Rainer Höfer, 2022-11-11 Providing a detailed survey of renewable raw materials for paints, inks and glues, this book is ideal for researchers and practitioners working in the areas of green chemistry, industrial chemistry and sustainability. Beginning with a brief history of coatings and adhesives, this book walks the reader through the chemistry, properties, sourcing and processing of a number of renewable raw materials including lipids, natural resins, proteins and carbohydrates. Their use in a range of recent developments and concepts from material protection to decorative paints and coatings, adhesives and sealants is highlighted, providing the reader with a complete and modern foundation to the field.

Environmental and Construction Engineering: Reality and the Future Sergey Vasil'yevich Klyuev, Alexander Vasil'yevich Klyuev, 2021-06-06 This book gathers the latest advances, innovations and applications in the field of construction engineering as presented by researchers and engineers at the International Conference Environmental and Construction Engineering Reality and the Future held in Belgorod, Russia on May 18-19, 2021. It covers highly diverse topics including industrial and civil construction, building materials, environmental engineering and sustainability, machines, aggregates and processes in construction. The contributions which were selected by means of a rigorous international peer review process highlight numerous exciting ideas that will spur novel research directions and foster multidisciplinary collaborations. *Alberta Oil Sands*, 2012-11-07 At 170 billion barrels, Canada's Oil Sands are the third largest reserves of developable oil in the world. The

Oil Sands now produce about 1.6 million barrels per day with production expected to double by 2025 to about 3.7 million barrels per day. The Athabasca Oil Sands Region (AOSR) in northeastern Alberta is the largest of the three oil sands deposits. Bitumen in the oil sands is recovered through one of two primary methods: mining and drilling. About 20 per cent of the reserves are close to the surface and can be mined using large shovels and trucks. Of concern are the effects of the industrial development on the environment. Both human-made and natural sources emit oxides of sulphur and nitrogen, trace elements and persistent organic compounds. Of additional concern are ground-level ozone and greenhouse gases. Because of the requirement on operators to comply with the air quality regulatory policies and to address public concerns, the not-for-profit multi-stakeholder Wood Buffalo Environmental Association (WBEA) has since 1997 been closely monitoring air quality in AOSR. In 2008, WBEA assembled a distinguished group of international scientists who have been conducting measurements and practical research on various aspects of air emissions and their potential effects on terrestrial receptors. This book is a synthesis of the concepts and results of those ongoing studies. It contains 19 chapters ranging from a global perspective of energy production, measurement methodologies and behavior of various air pollutants during fossil fuel production in a boreal forest ecosystem, towards designing and deploying a multi-disciplinary proactive and long-term environmental monitoring system that will also meet regulatory expectations. Covers measurement of emissions from very large industrial sources in a region with huge international media profile. Validation of measurement technologies can be applied globally. The new approaches to ecological monitoring described can be applied in other forested regions.
