Introduction to Computer Programming in Visual Basic 4.0 Robert J. Spear, Timothy M. Spear, 1997
Written for university and community college students whose programming interests are Windows-based and business-oriented, this text assumes no previous knowledge of computer programming. In conjunction with Windows 95 and Visual Basic 4.0 software, this text will help students learn the fundamentals of writing computer applications in a Windows environment. It will allow them to create powerful graphical programs for school, home, or business. The authors' project approach takes the student through a seven-step programming process to create working applications. As the student's competence grows, step-by-step instructions become less detailed. Students learn structured programming techniques and a systematic approach to writing and debugging programs that are applicable to any language. At the same time, they become proficient in most of the features of Microsoft Visual Basic 4.0.
