Jennings' Little Hut Anthony Buckeridge, 2001-08-05 The woodlands at Linbury Court become squatters' territory when Jennings comes up with the idea of building huts out of reeds and branches. But things can only go horribly wrong for Jennings when he is put in charge of Elmer, the treasured goldfish, and even worse when the Headmaster pays the squatters a visit. **What Counts in Teaching Mathematics** Sandy Schuck, Peter Pereira, 2011-02-04 In this book, internationally recognised scholars and practitioners synthesise current practice and research developments in the area of mathematics teacher education and mathematics education. The book's two sections examine the role and significance of collaborations and critical friends in the self-study of mathematics teaching and teacher education and the emerging conflicts, dilemmas, and incongruities arising from the study of mathematics education practices. The book considers the insights gained from self-analysis regarding the practitioner themselves as well as their pedagogical content, students, and approaches. The contributions highlight the complexity, characteristics, and features of mathematics education. The chapters reveal nuances in teaching and learning that are of particular relevance in mathematics education. In addition, the book contains ideas and suggestions on how to enhance the teaching of mathematical content to pre-service teachers. Accordingly, the book appeals to a wide audience of educators, including education academics, teachers, student teachers, and researchers. As teacher educators involved in mathematics education, reflection on practice and engagement in practitioner research is becoming increasingly important in our efforts to enhance our teaching. Teachers and student teachers also gain from the insights arising from such reflection. The knowledge and experience encapsulated in this book provides much for the mathematics education community to build on. **Tools, Treasures, & Measures for Middle Grade Success** Imogene Forte, Sandra Schurr, 1994 Designed to serve as a hands-on companion to *The definitive middle school guide*. **ENC Focus**, 1994 [Using Children's Literature in Math and Science](#), 1997

The Software Encyclopedia, 1988 **Student Learning Communities** Douglas Fisher, Nancy Frey, John Almarode, 2020-11-25 Student learning communities (SLCs) are more than just a different way of doing group work. Like the professional learning communities, they resemble SLCs, provide students with a structured way to solve problems, share insight, and help one another continually develop new skills and expertise. With the right planning and support, dynamic collaborative learning can thrive everywhere. In this book, educators Douglas Fisher, Nancy Frey, and John Almarode explain how to create and sustain student learning communities by designing group experiences and tasks that encourage dialogue, fostering the relational conditions that advance academic, social, and emotional development, providing explicit instruction on goal setting and opportunities to practice, progress monitoring, using thoughtful teaming practices to build cognitive

metacognitive and emotional regulation skills Teaching students to seek give and receive feedback that amplifies their own and others learning and Developing the specific leadership skills and strategies that promote individual and group success Examples from face to face and virtual K 12 classrooms help to illustrate what SLCs are and teacher voices testify to what they can achieve No more hoping the group work you re assigning will be good enough or that collaboration will be its own reward No more crossing your fingers for productive outcomes or struggling to keep order assess individual student contributions and ensure fairness Student Learning Communities shows you how to equip your students with what they need to learn in a way that is truly collective makes them smarter together than they would be alone creates a more positive classroom culture and enables continuous academic and social emotional growth **Resources in Education** ,1997

epistemological assumptions and historical traditions in two different school systems and the teaching and learning of proof there The cognitive dimension is important in order to avoid that the didactical choices do not fit the needs and the potentialities of learners Our choice was to firstly deal with the features of reasoning related to proof mainly concerning the relationships between argumentation and proof The second part of this book concentrates on some crucial cognitive and didactical aspects of the development of proof from the early approach in primary school to high school and university We will show how suitable didactical proposals within appropriate educational contexts can match the great yet underestimated young students potentialities in approaching theorems and theories
