Castiglione, Uri Hershberg, Francesca Di Rosa, 2023-07-06 *Resolution Pharmacology - Innovative Therapeutic Approaches Based on the Biology of Resolution to Control Chronic Diseases of Western Societies* Mauro Perretti, Trinidad

Montero-Melendez, Lucy V. Norling, 2019-11-04 In this eBook we have grouped together 16 original contributions which have addressed the translational potential for therapeutics developed on the conceptual framework of the resolution of inflammation The take home message of our effort and the efforts of our colleagues who wrote these pieces is that completely different drugs can be designed and modelled on the mediators and targets of resolution By implementing this 180 shift in the way we plan the drug development programme that is by focusing on agonists and or promoting the actions of pro resolution agonists we can offer a fresh approach to the clinical management of chronic diseases that affect the modern society With this series of articles we foresee the birth of Resolution Pharmacology The 16 contributions presented herein confirm the broad relevance of pro resolving physio pharmacology with the description of pro resolving mechanisms in distinct diseases from atherosclerosis and heart infarct to cystic fibrosis and diabetes This testifies on one hand the fundamental role that inflammatory mechanisms play in virtually all pathological settings and on the other hand the great potential that a novel approach to anti inflammatory therapy by exploiting resolution mediators and targets may have Thus while there is broad recognition that evidence based interventions have transformed cardiovascular inflammation and endocrine care new therapies are still needed for growing numbers of patients with unmet needs As an example an estimated 17 million people world wide die annually of cardiovascular diseases particularly heart attacks and strokes Cardiovascular diseases occur almost equally in men and women and are the leading cause of death and morbidity worldwide It is estimated that only 1 1 000 compounds entering preclinical testing are then trialled in man and the actual cost of developing a new therapeutic into clinical practice has grown exponentially over the past two decades estimated 1 2B Over the last 20 years or more scientists have appreciated the biology of the resolution of inflammation which provides a new paradigm in our

understanding of the inflammatory process with the appreciation of genetic molecular and cellular mechanisms that are engaged to actively resolve inflammation The resolution of acute inflammation is enabled by counter regulatory checkpoints to terminate the host reaction while at the same time promoting healing and repair The potential of lipid mediators to enact pro resolving effects in the context of cystic fibrosis is presented by Recchiuti et al while Fredman reasons on the potential for these molecules in atherosclerosis This resonates well with the contributions from Bäck and colleagues who have focused on pro resolving receptors to offer vasculo protection in intimal hyperplasia and more generally in cardiovascular disease On the same vein is the scholar contribution of Leoni and Soehnlein who focus on heart disease with Qin et al presenting the latest findings on the effect of an Annexin A1 derived peptide in myocardial infarction Hansen et al and de Gaetano et al bring in the complexity of diabetes and associated morbidity with a focus on specialised pro resolving lipid mediators but also introducing the potential of dietary approaches As the western diet favours disease an omega 3 rich diet can lead to higher availability of lipid mediators to afford tissue protection if not reverting its pathological status Docosahexaenoic acid and its bioactive derivatives are endowed with potent anti nociceptive properties following bone fracture as shown by Zhang et al The broad relevance of the pharmacological approach reaches the skin with Resolvin D1 protecting against UV irradiation Saito et al Reduced skin inflammation is also achieved with an Annexin A1 peptide that impacts on the outcome of heterologous transplantation Lacerda et al Indeed modulating the phenotype of immune cells can provide long lasting beneficial outcomes as attained with CDK inhibitors Cartwright et al and PI3K inhibitors in experimental gout Galvao et al Such an effect is also achieved with a third group of pro resolving therapeutics the melanocortin receptor agonists with important modulation of macrophage reactivity Patruno et al with Spana et al providing new pharmacology following selective activation of the MC1 receptor Finally Hopkin et al discuss the potential for targeting immune cell trafficking as a way to control immune mediated diseases bringing in not only pro resolving mediator agonists but also approaches to reduce chemo cytokine gradients or modulating S1P and 11 beta hydroxysteroid dehydrogenase Finally we wish to highlight that this wealth of science has also brought to the forefront specific pro resolving receptors including FPR2 ALX GPR32 ChemR23 and MC1 all G protein coupled receptors that are therefore amenable to pharmacological exploitation for drug discovery programmes We see that not only agonists to the receptors can be developed some of them modelled on the natural ligands e g resolvins lipoxins Annexin A1 derived peptides or melanocortin peptides but also that the creativity of this pharmacology can be attained through biased ligands and positive allosteric modulators Deep knowledge of pro resolving receptor biology and their cell specific signalling can accelerate the generation of novel anti inflammatory depicted on the resolution of inflammation In conclusion with this eBook we propose time is ready to exploit the concepts of resolution and use its targets and mediators for the identification of better drugs to establish Resolution Pharmacology We predict Resolution Pharmacology will represent an important innovation in the way common diseases will be treated in the next decades of this

Russia-China Relations in the Post-Crisis International Order Marcin Kaczmariski, 2015-03-24 The book explores
developments in Russia China relations in the aftermath of the global economic crisis arguing that the crisis transformed
their bilateral affairs regional liaisons and crucially altered the roles both states play on the international arena Discussing
how Russo Chinese cooperation has accelerated in energy trade arms sales and in the Russian Far East the focus is on how
the still mutually advantageous relationship has become more asymmetric than ever reflecting China s meteoric rise and
Russia s decline These dynamics are explored through three perspectives domestic regional and global Domestically the book
traces the role of political coalitions and key interest groups involved in how the two states shape their reciprocal policies
Changes in the regional dimension are examined with particular reference to a new status quo emerging in Central Asia The
book concludes by explaining how the changing relationship is affecting the international order including the balance of
power vis vis the United States as well as Russia and China s changing attitudes towards global governance
