Responsive Teaching in Science and Mathematics Amy D. Robertson, Rachel Scherr, David Hammer, 2015-10-05 Answering calls in recent reform documents to shape instruction in response to students' ideas while integrating key concepts and scientific and/or mathematical practices, this text presents the concept of responsive teaching, synthesizes existing research, and examines implications for both research and teaching. Case studies across the curriculum from elementary school through adult education illustrate the variety of forms this approach to instruction and learning can take, what is common among them, and how teachers and students experience it. The cases include intellectual products of students' work in responsive classrooms and address assessment methods and issues. Many of the cases are supplemented with online resources: <http://www.studentsthinking.org/rtsm>, including classroom video and extensive transcripts providing readers with additional opportunities to immerse themselves in responsive classrooms and to see for themselves what these environments look and feel like.

The Underrepresentation of Women in Science: International and Cross-Disciplinary Evidence and Debate Stephen J. Ceci, Wendy M. Williams, Shulamit Kahn, 2018-04-20 There is no shortage of articles and books exploring women's underrepresentation in science. Everyone is interested: academics, politicians, parents, high school girls, and boys. Women in search of college majors, administrators working to accommodate women's educational interests: the list goes on. But one thing often missing is an evidence-based examination of the problem, uninfluenced by personal opinions, accounts of lived experiences, anecdotes, and the always encroaching inputs of popular culture. This is why this special issue of *Frontiers in Psychology* can make a difference. In it, a diverse group of authors and researchers with even more diverse viewpoints find themselves united by their empirical, objective approaches to understanding women's underrepresentation in science today. The questions considered within this special issue span academic disciplines, methods, levels of analysis, and nature of analysis. What these articles share is their scholarly, evidence-based approach to understanding a key issue of our time.

Imaginative Science Education Yannis Hadzigeorgiou,2016-05-26 This book is about imaginative approaches to teaching and learning school science Its central premise is that science learning should reflect the nature of science and therefore be approached as an imaginative creative activity As such the book can be seen as an original contribution of ideas relating to imagination and creativity in science education The approaches discussed in the book are storytelling the experience of wonder the development of romantic understanding and creative science including science through visual art poetry and dramatization However given the perennial problem of how to engage students of all ages in science the notion of aesthetic experience and hence the

possibility for students to have more holistic and fulfilling learning experiences through the aforementioned imaginative approaches is also discussed Each chapter provides an in depth discussion of the theoretical background of a specific imaginative approach e g storytelling wonder full science reviews the existing empirical evidence regarding its role in the learning process and points out its implications for pedagogy and instructional practices Examples from physical science illustrating its implementation in the classroom are also discussed In distinguishing between participation in a science activity and engagement with science ideas per se the book emphasizes the central role of imaginative engagement with science content knowledge and thus the potential of the recommended imaginative approaches to attract students to the world of science

Seeing Students Learn Science National Academies of Sciences, Engineering, and Medicine,Division of Behavioral and Social Sciences and Education,Board on Testing and Assessment,Board on Science Education,Heidi Schweingruber,Alexandra Beatty,2017-04-24 Science educators in the United States are adapting to a new vision of how students learn science Children are natural explorers and their observations and intuitions about the world around them are the foundation for science learning Unfortunately the way science has been taught in the United States has not always taken advantage of those attributes Some students who successfully complete their K 12 science classes have not really had the chance to do science for themselves in ways that harness their natural curiosity and understanding of the world around them The introduction of the Next Generation Science Standards led many states schools and districts to change curricula instruction and professional development to align with the standards Therefore existing assessments whatever their purpose cannot be used to measure the full range of activities and interactions happening in

science classrooms that have adapted to these ideas because they were not designed to do so Seeing Students Learn Science is meant to help educators improve their understanding of how students learn science and guide the adaptation of their instruction and approach to assessment It includes examples of innovative assessment formats ways to embed assessments in engaging classroom activities and ideas for interpreting and using novel kinds of assessment information It provides ideas and questions educators can use to reflect on what they can adapt right away and what they can work toward more gradually
