HUMAN ANATOMY AND PHYSIOLOGY

Study of the human organism and its internal body

Anatomy

The study of the structure and organization of the human body

Physiology

The study of the function and processes of the human body

Structural levels

Studying the human body at the different levels of structure and function

- 1. Chemical level - study of the chemical composition of the body
- 2. Cellular level - study of the structure and function of cells
- 3. Tissue level - study of the structure and function of tissues
- 4. Organ level - study of the structure and function of organs
- 5. System level - study of the structure and function of body systems
- 6. Organism level - study of the structure and function of the whole body

CELLS AND TISSUES

Cells are the basic units of structure and function of the body

Characteristics of cells

All cells are eukaryotic and have a nucleus

Cells are specialized for their function

Cells are surrounded by a cell membrane

Cells are connected to each other

Cells are constantly changing

The tissue is the group of cells that work together to perform a specific function

Types of cells

Epithelial cells - cover the body and line internal organs

Connective tissue - support and connect other cells

Muscle cells - contract and move the body

Nerve cells - transmit information

NERVOUS SYSTEM

Functions

1. Sensory - receive information from the environment

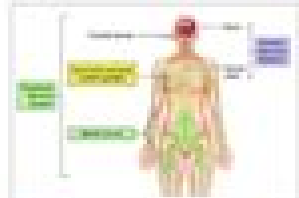

2. Integrative - process information and make decisions

3. Motor - respond to information and control the body

4. Homeostasis - maintain the internal environment

5. Communication - coordinate the activities of the body

6. Control - regulate the activities of the body

Structure

The nervous system is composed of the brain and the spinal cord

The brain is the control center of the body

The spinal cord is the communication pathway between the brain and the rest of the body

The peripheral nerves are the communication pathways between the brain and the rest of the body

The sensory neurons are the communication pathways between the rest of the body and the brain

The motor neurons are the communication pathways between the brain and the rest of the body

UNIT OF MEASUREMENT

The unit of measurement for length is the meter

Types of neurons

1. Sensory neurons - receive information from the environment

2. Motor neurons - control the body's response

3. Interneurons - process information

4. Glial cells - support and protect neurons

5. Schwann cells - myelinate axons

6. Astrocytes - support and regulate the environment of neurons

7. Microglia - defend the brain against infection

8. Ependymal cells - line the ventricles of the brain

9. Oligodendrocytes - myelinate axons in the brain

10. Satellite cells - support and protect neurons in the peripheral nervous system

11. Schwann cells - myelinate axons in the peripheral nervous system

12. Endothelial cells - line the blood vessels

13. Fibroblasts - produce connective tissue

14. Macrophages - engulf and destroy pathogens

15. T cells - kill infected cells

16. B cells - produce antibodies

17. Natural killer cells - kill infected cells
