**Biomedical Visualisation** Paul M. Rea, 2020-06-02 This edited book explores the use of technology to enable us to visualise the life sciences in a more meaningful and engaging way. It will enable those interested in visualisation techniques to gain a better understanding of the applications that can be used in visualisation imaging and analysis education engagement and training. The reader will be able to explore the utilisation of technologies from a number of fields to enable an engaging and meaningful visual representation of the biomedical sciences with a focus in this volume related to anatomy and clinically applied scenarios. The first eight chapters examine a variety of tools, techniques, methodologies and technologies which can be utilised to visualise and understand biological and medical data. This includes web based 3D visualisation, ultrasound, virtual and augmented reality as well as functional connectivity, magnetic resonance imaging, storyboarding and a variety of stereoscopic and 2D/3D transitions in learning. The final two chapters examine the pedagogy behind digital techniques and tools from social media to online distance learning techniques.

**International Anatomical Education** Iain D. Keenan, Isabel Stabile, Asha Venkatesh, 2025-08-10 Anatomy is intrinsically a three dimensional and visual discipline. Anatomical education is therefore primarily delivered using physical and digital three dimensional visual approaches to support student understanding of anatomy including human body donor specimens and technology enhanced learning resources. The Trans European Pedagogic Anatomy Research Group (TEPARG) was founded in 2003 to promote scholarly research informed and evidence based approaches to the design and implementation of anatomical education. TEPARG brings together enthusiastic anatomy teachers and pedagogic researchers from across Europe and beyond to share good practice and create new projects in support of anatomical education. The work presented in this volume demonstrates careful consideration by the authors of several key areas within the current complex landscape of international anatomical education. This volume is presented in two subthemes with the first section concerning broad considerations of modern anatomy curricula in England, Scotland, Wales and Austria and the second section involving discussion of pedagogic innovations for the delivery of anatomical education to learners and to the wider public in Italy, Spain, Australia and the United Kingdom. The work presented in this volume will have implications for anatomical educators and pedagogic researchers in the anatomical sciences who are seeking to develop their own anatomy curricula and to implement effective evidence based and research informed visualization strategies and innovations into their teaching.

**The Anatomy Museum** Elizabeth Hallam, 2008

Anatomy museums around the world showcase preserved corpses in service of education and medical advancement but they are little known and have been largely hidden from the public eye Elizabeth Hallam here investigates the anatomy museum and how it reveals the fascination and fears that surround the dead body in Western societies Hallam explores the history of these museums and how they operate in the current cultural environment Their regulated access increasingly clashes with evolving public mores toward the exposed body as demonstrated by the international popularity of the Body Worlds exhibition The book examines such related topics as artistic works that employ the images of dead bodies and the larger ongoing debate over the disposal of corpses Issues such as aesthetics and science organ and body donations and the dead body in Western religion and ritual are also discussed here in fascinating depth The Anatomy Museum unearths a strange and compelling cultural history that investigates the ideas of preservation human rituals of death and the spaces that our bodies occupy in this life and beyond
