

Question 1: Water at 20°C falls from a height of 854 m. If the whole energy is used in increasing the temperature, find out the final temperature. Specific heat of water is 4200 J/K kg .

Given that

$$T_1 = 20^{\circ}\text{C} = 20 + 273 = 293 \text{ K}$$

$$\text{height} = h = 854 \text{ m}$$

$$\text{Specific heat of water} = 4200 \text{ J K}^{-1} \text{ kg}^{-1}$$

$$\text{Final temperature} = T_2 = ?$$

$$\text{P.E} = mgh \quad \text{--- (1)}$$

Solution:

We know that

$$\Delta Q = cm \Delta T \quad \text{--- (2)}$$

Whole energy is used in increasing the temperature (Given)

$$\Delta Q = \text{P.E}$$

From (1) and (2)

$$cm \Delta T = mgh$$

$$c \Delta T = gh$$

$$c (T_2 - T_1) = gh$$

$$T_2 - T_1 = \frac{gh}{c}$$

$$T_2 = \frac{gh}{c} + T_1$$

$$= \frac{9.8 \times 854}{4200} + 293$$

$$= \frac{8369.2}{4200} + 293 = 1.99 + 293$$

$$T_2 = 294.99 \text{ K} = 295 - 273^{\circ}\text{C}$$

$$T_2 = 22^{\circ}\text{C}$$

Introduction to Statistical Thermodynamics Marcus Elstner, Qiang Cui, Maja Gruden, 2024-05-09 This textbook presents the fundamentals of statistical thermodynamics and electronic structure theory and focuses on introducing the central concepts of thermodynamics and their relation to microscopic theories in a conceptually clear and simple way The emphasis is on the description of what is going on at the microscopic level which allows readers to understand the various facets of entropy as the fundamental driving force of all material behaviors An atomistic perspective is introduced from the beginning highlighting the importance of molecular structure and microscopic degrees of freedom for understanding the thermodynamic properties of materials such as heat capacity and magnetization Because of their importance in various research fields classical and quantum aspects are treated equally allowing modern research topics to be addressed with molecular simulation and electronic structure theory It is a valuable resource for undergraduate and graduate students in chemistry physics and materials science and its modular structure makes it suitable for any reader Amino Acids, Peptides and Proteins Luc Brunsveld, 2012 In an ever increasing domain of activity this annual compilation of the world's research effort provides insight into an important area of biological chemistry **Ice and Refrigeration**, 1892 **Gravity and the Quantum** Jasjeet Singh Bagla, Sunu Engineer, 2017-02-23 This book provides a compilation of in depth articles and reviews on key topics within gravitation cosmology and related issues It is a celebratory volume dedicated to Prof Thanu Padmanabhan Paddy the renowned relativist and cosmologist from IUCAA India on the occasion of his 60th birthday The authors many of them leaders of their fields are all colleagues collaborators and former students of Paddy who have worked

Kinetic Theory of Nonequilibrium Ensembles, Irreversible Thermodynamics, and Generalized Hydrodynamics Byung Chan Eu, 2016-08-02 This book presents the fundamentals of irreversible

thermodynamics for nonlinear transport processes in gases and liquids as well as for generalized hydrodynamics extending the classical hydrodynamics of Navier Stokes Fourier and Fick Together with its companion volume on relativistic theories it provides a comprehensive picture of the kinetic theory formulated from the viewpoint of nonequilibrium ensembles in both nonrelativistic and in Vol 2 relativistic contexts Theories of macroscopic irreversible processes must strictly conform to the thermodynamic laws at every step and in all approximations that enter their derivation from the mechanical principles Upholding this as the inviolable tenet the author develops theories of irreversible transport processes in fluids gases or liquids on the basis of irreversible kinetic equations satisfying the H theorem They apply regardless of whether the processes are near to or far removed from equilibrium or whether they are linear or nonlinear with respect to macroscopic fluxes or thermodynamic forces Both irreversible Boltzmann and generalized Boltzmann equations are used for deriving theories of irreversible transport equations and generalized hydrodynamic equations which rigorously conform to the tenet All observables described by the so formulated theories therefore also strictly obey the tenet

Chemical Thermodynamics For Metals And Materials (With Cd-rom For Computer-aided Learning) Hae-geon Lee,1999-10-13 A number of thermodynamic books claiming to be original in both presentation and approach have been published However thermodynamics is still a confusing subject for uninitiated students and an easy to forget one for graduate engineers In order to solve these problems this computer aided learning package textbook and CD ROM takes a new approach This package is unique and beneficial in that it simulates a classroom lecture it actually writes important equations and concepts on a virtual board underlines draws circles places ticks to emphasise important points draws arrows to indicate relationships uses colours for visual effect erases some parts to write new lines and even repeats some parts of the lesson to stress their importance This realistic simulation is made possible by the employment of the multimedia capabilities of the modern day computer Readers are not just passively presented with thermodynamics they can also interactively select and repeat any particular topic of interest as many times as they want This flexibility allows readers to choose their own pace of presentation This complementary set is in many important respects better than the books that are currently available on the subject
