Theory of Functional Differential Equations Jack K. Hale, 2012-12-06 Since the publication of my lecture notes Functional Differential Equations in the Applied Mathematical Sciences series many new developments have occurred As a consequence it was decided not to make a few corrections and additions for a second edition of those notes but to present a more comprehensive theory The present work attempts to consolidate those elements of the theory which have stabilized and also to include recent directions of research The following chapters were not discussed in my original notes Chapter 1 is an elementary presentation of linear differential difference equations with constant coefficients of retarded and neutral type Chapter 4 develops the recent theory of dissipative systems Chapter 9 is a new chapter on perturbed systems Chapter 11 is a new presentation incorporating recent results on the existence of periodic solutions of autonomous equations Chapter 12 is devoted entirely to neutral equations Chapter 13 gives an introduction to the global and generic theory There is also an appendix on the location of the zeros of characteristic polynomials The remainder of the

material has been completely revised and updated with the most significant changes occurring in Chapter 3 on the properties of solutions Chapter 5 on stability and Chapter 10 on behavior near a periodic orbit

Methods of Geometric Analysis in Extension and Trace Problems Alexander Brudnyi, Prof. Yuri Brudnyi Technion R&D Foundation Ltd, 2011-10-07 The book presents a comprehensive exposition of extension results for maps between different geometric objects and of extension trace results for smooth functions on subsets with no a priori differential structure Whitney problems The account covers development of the area from the initial classical works of the first half of the 20th century to the flourishing period of the last decade Seemingly very specific these problems have been from the very beginning a powerful source of ideas concepts and methods that essentially influenced and in some cases even transformed considerable areas of analysis Aside from the material linked by the aforementioned problems the book also is unified by geometric analysis approach used in the proofs of basic results This requires a variety of geometric tools from convex and combinatorial geometry to geometry of metric space theory to Riemannian and coarse geometry and more The necessary facts are

presented mostly with detailed proofs to make the book accessible to a wide audience

Harris is famous around the world for his lively textbooks and enthusiastic teaching as well as for his seminal research contributions. The articles are written in this spirit: clear, original, engaging, enlivened by examples and accessible to young mathematicians. The articles in this volume focus on the moduli space of curves and more general varieties: commutative algebra, invariant theory, enumerative geometry, both classical and modern, rationally connected and Fano varieties, Hodge theory and abelian varieties and Calabi-Yau and hyperkähler manifolds. Taken together, they present a comprehensive view of the long frontier of current knowledge in algebraic geometry. Titles in this series are co-published with the Clay Mathematics Institute, Cambridge, MA.

Resources in Education, 2000 *South African Schooling: The Enigma of Inequality* Nic Spaull, Jonathan D. Jansen, 2019-11-05 This volume brings together many of South Africa's leading scholars of education and covers the full range of South African schooling from financing and policy reform to in-depth discussions of literacy, numeracy, teacher development and curriculum change. The book moves beyond a historical analysis and provides an inside view of the questions South African scholars are now grappling with: Are there different and preferential equilibria we have not yet thought of or explored and if so, what are they? In practical terms, how does one get to a more equitable distribution of teachers, resources and learning outcomes? While decidedly local, these questions resonate throughout the developing world. South Africa today is the most unequal country in the world. The richest 10% of South Africans lay claim to 65% of national income and 90% of national wealth. This is the largest 90/10 gap in the world and one that is reflected in the schooling system. Two decades after apartheid, it is still the case that the life chances of most South African children are determined not by their ability or the result of hard work and determination but instead by the colour of their skin, the province of their birth and the wealth of their parents. Looking back on almost three decades of democracy in South Africa, it is this stubbornness of inequality and its patterns of persistence that demands explanation, justification and

analysis This is a landmark book on basic education in South Africa an essential volume for those interested in learning outcomes and their inequality in South Africa The various chapters present conceptually and empirically sophisticated analyses of learning outcomes across divisions of race class and place The book brings together the wealth of decades of research output from top quality researchers to explore what has improved what has not and why Prof Lant Pritchett Harvard University There is much wisdom in this collection from many of the best education analysts in South Africa No surprise that they conclude that without a large and sustained expansion in well trained teachers early childhood education and adequate school resources South Africa will continue to sacrifice its people s future to maintaining the privileges of the few Prof Martin Carnoy Stanford University Altogether one can derive from this very valuable volume if not an exact blueprint for the future then certainly at least a crucial and evidence based itinerary for the next few steps Dr Luis Crouch RTI
