

Analysis of a Squirrel Gene Pool

Dr. Robert M. Smith, Director of the Center for the Study of the History of the American West, is the author of the book "The American West: A History." The book is a comprehensive history of the American West, covering the period from the early 19th century to the present. It is a well-written and informative book that is highly recommended for anyone interested in the history of the American West.

Freeland,Heather Kirk,Stephen D. Petersen,2011-03-23 Molecular Ecology 2nd Edition provides an accessible introduction to the many diverse aspects of this subject The book takes a logical and progressive approach to uniting examples from a wide range of taxonomic groups The straightforward writing style offers in depth analysis whilst making often challenging subjects such as population genetics and phylogenetics highly comprehensible to the reader The first part of the book introduces the essential underpinnings of molecular ecology and gives a review of genetics and discussion of the molecular markers that are most frequently used in ecological research and a chapter devoted to the newly emerging field of ecological genomics The second half of the book covers specific applications of molecular ecology covering phylogeography behavioural ecology and conservation genetics The new edition provides a thoroughly up to date introduction to the field emphasising new types of analyses and including current examples and techniques whilst also retaining the information rich highly readable style which set the first edition apart Incorporates both theoretical and applied perspectives Highly accessible user friendly approach and presentation Includes self assessment activities with hypothetical cases based on actual species and realistic data sets Uses case studies to place the theory in context Provides coverage of population genetics genomics phylogeography behavioural ecology and conservation genetics **Genetics Fundamentals Notes** Debasish Kar,Sagartirtha Sarkar,2022-10-06 This up to date and comprehensive textbook is essential reading material for advanced undergraduate and graduate students with a course module in genetics and developmental biology The book provides clear concise and rigorous

foundational concepts of genetics It opens with an introductory chapter that provides an overview of genetics The book includes separate and detailed sections on classical genetics molecular genetics and population genetics It covers basic and foundational principles such as Mendelian genetics chromosomal theory transcription translation mutation and gene regulation It further includes chapters on advanced topics such as molecular genetic techniques genomics and applied molecular genetics The concluding section includes chapters on population genetics developmental genetics and evolutionary genetics The chapters are written by authors with in depth knowledge of the field The book is replete with interesting examples case studies questions and suggested reading It is useful to students and course instructors in the field of human genetics developmental biology life sciences and biotechnology It is also meant for researchers who wish to further their understanding about the fundamental concepts of genetics

Sociobiology Edward O. Wilson, 2000-03-24 When this work was first published it started a tumultuous round in the age old nature versus nurture debate It shows how research in human genetics and neuroscience has strengthened the case for biological understanding of human nature

The Maladapted Mind Simon Baron-Cohen, 2013-04-15 Newly available in paperback this is the first book to bring together classic and contemporary readings illustrating the new subdiscipline evolutionary psychopathology Each chapter demonstrates how evolutionary arguments are being brought to bear on the study of a different psychiatric condition or pathological behaviour The Maladapted Mind is aimed primarily at advanced students and researchers in the fields of psychiatry abnormal psychology biological anthropology evolutionary biology and cognitive science

Biodiversity, Conservation and Sustainability in Asia Münir Öztürk, Volkan Altay, Recep Efe, 2021-04-24 Of the world's seven continents Asia is the largest Its physical landscapes political units and ethnic groups are both wide ranging and many Southwest South and Middle Asia are highly populated regions which as a whole cover an extremely large area of varied geography In total this domain is unique in its plant diversity and large vegetation zones with different communities and biomes It is rich in endemics with specific and intraspecific diversity of fruit trees and medicinal plants including a number of rare high value species At the same time much of the land in the region is too dry or too rugged with many geographical extremes Overgrazing oil and mineral extraction and poaching are the major threats in the area This two volume project focuses on the dynamic biodiversity of the region with in depth analysis on phytosociology plants animals and agroecology There are also chapters that explore new applications as well as approaches to overcome problems associated with climate change Much of the research and analysis are presented here for the first time We believe this work is a valuable resource for professionals and researchers working in the fields of plant diversity and vegetation animal diversity and animal populations and geo diversity and sustainable land use among others The first volume guides our readers to West Asia and the Caucasus region while volume two focuses on issues unique to South and Middle Asia
