The Influence of Technology on Social Network Analysis and Mining Tansel Özyer,Jon Rokne,Gerhard Wagner,Arno H.P. Reuser,2013-03-15 The study of social networks was originated in social and business communities In recent years social network research has advanced significantly the development of sophisticated techniques for Social Network Analysis and Mining SNAM has been highly influenced by the online social Web sites email logs phone logs and instant messaging systems which are widely analyzed using graph theory and machine learning techniques People perceive the Web increasingly as a social medium that fosters interaction among people sharing of experiences and knowledge group activities community formation and evolution This has led to a rising prominence of SNAM in academia politics homeland security and business This follows the pattern of known entities of our society that have evolved into networks in which actors are increasingly dependent on their structural embedding General areas of interest to the book include information science and mathematics communication studies business and organizational studies sociology psychology anthropology applied linguistics biology and medicine New Trends in Data Warehousing and Data Analysis Stanislaw Kozielski,Robert Wrembel,2008-10-23 Most of modern enterprises institutions and organizations rely on knowledge based management systems In these systems knowledge is gained from data analysis Today knowledge based management systems include data warehouses as their core components Data integrated in a data warehouse are analyzed by the so called On Line Analytical Processing OLAP applications designed to discover trends patterns of behavior and anomalies as well as finding dependencies between data Massive amounts of integrated data and the complexity of integrated data coming from many different sources make data integration and processing challenging New Trends in Data Warehousing and Data Analysis brings together the most recent research and practical achievements in the DW and OLAP technologies It provides an up to date bibliography of published works and the resource of research achievements Finally the book assists in the dissemination of knowledge in the field of advanced DW and OLAP *Document Analysis and Recognition - ICDAR 2021* Josep Lladós,Daniel Lopresti,Seiichi Uchida,2021-09-04 This four volume set of LNCS 12821 LNCS 12822 LNCS 12823 and LNCS 12824 constitutes the refereed proceedings of the 16th International Conference on Document Analysis and Recognition ICDAR 2021 held in Lausanne Switzerland in September 2021 The 182 full papers were carefully reviewed and selected from 340 submissions and are presented with 13 competition reports The papers are organized into the following topical sections document analysis for literature search document summarization and translation multimedia document analysis mobile text recognition document analysis for social good indexing and retrieval of documents

physical and logical layout analysis recognition of tables and formulas and natural language processing NLP for document understanding *Business Case Analysis Process Workbook* John K. Plinius, 2002 *Gaussian Processes for Positioning Using Radio Signal Strength Measurements* Yuxin Zhao, 2019-02-27 Estimation of unknown parameters is considered as one of the major research areas in statistical signal processing In the most recent decades approaches in estimation theory have become more and more attractive in practical applications Examples of such applications may include but are not limited to positioning using various measurable radio signals in indoor environments self navigation for autonomous cars image processing radar tracking and so on One issue that is usually encountered when solving an estimation problem is to identify a good system model which may have great impacts on the estimation performance In this thesis we are interested in studying estimation problems particularly in inferring the unknown positions from noisy radio signal measurements In addition the modeling of the system is studied by investigating the relationship between positions and radio signal strength measurements One of the main contributions of this thesis is to propose a novel indoor positioning framework based on proximity measurements which are obtained by quantizing the received signal strength measurements Sequential Monte Carlo methods to be more specific particle filter and smoother are utilized for estimating unknown positions from proximity measurements The Cram r Rao bounds for proximity based positioning are further derived as a benchmark for the positioning accuracy in this framework Secondly to improve the estimation performance Bayesian non parametric modeling namely Gaussian processes have been adopted to provide more accurate and flexible models for both dynamic motions and radio signal strength measurements Then the Cram r Rao bounds for Gaussian process based system models are derived and evaluated in an indoor positioning scenario In addition we estimate the positions of stationary devices by comparing the individual signal strength measurements with a pre constructed fingerprinting database The positioning accuracy is further compared to the case where a moving device is positioned using a time series of radio signal strength measurements Moreover Gaussian processes have been applied to sports analytics where trajectory modeling for athletes is studied The proposed framework can be further utilized to carry out for instance performance prediction and analysis health condition monitoring etc Finally a grey box modeling is proposed to analyze the forces particularly in cross country skiing races by combining a deterministic kinetic model with Gaussian process
