A-

Muscles, the specialized tissues that facilitate body movement, make up about 40% of body weight. Most body muscle is the voluntary type, called **skeletal muscle** because it is attached to the bony skeleton. Skeletal muscle contributes to body contours and shape, and it composes the organ system called the **muscular system**. These muscles allow you to grin, frown, run, swim, shake hands, swing a hammer, and to otherwise manipulate your environment. The **balance** of body muscle consists of **smooth** and **cardiac muscles**, which form the bulk of the walls of hollow organs and the heart. Smooth and cardiac muscles are involved in the transport of materials within the body.

Study activities in this chapter deal with microscopic and gross structure of muscle, identification of voluntary muscles, body movements, and important understandings of muscle physiology.
