A Passion For Science:

A Passion for Science Lewis Wolpert, Alison Richards, 1988 A collection of conversations in which scientists from all fields give non technical accounts of their lives in the profession showing how incidents and human characteristics have influenced discoveries

Passionate Minds Lewis Wolpert, Alison Richards, 2023 Wolpert investigates the style and motivation of some of the most eminent scientists in the world exploring how their backgrounds have shaped their careers aspirations and discoveries

Labs of Our Own Sig / Sara Giordano, 2025-02-11 From climate change to COVID 19 to reproductive justice there has been deep political polarization around science Labs of Our Own provides a unique entry point into these twenty first century science wars by focusing on our affective relationships to science The book delves into various sites where scientists teachers artists and activists claim to create more democratic access to science from DIY biology community labs to feminist classrooms to activist science practitioners The reader will find that these claims for and attempts at democratic sciences not only impact what counts as science and who counts as a scientist but reconfigure who is included in the proper public Instead of arguing for a knee jerk defense of science against right wing attacks Labs of Our Own builds the case for a feminist antiracist decolonial queer science tinkering practice that intentionally politically and ethically acts to produce new challenges to the definition and boundaries of the human

Passionate Minds Lewis Wolpert, Alison Richards, 1997-09-25 The popular stereotype of the scientist as mad boffin or weedy nerd has been peddled widely in film and fiction with the implication that the world of science is far removed from the intellectual and emotional messiness of other human activities In *Passionate Minds* distinguished scientist Lewis Wolpert investigates the style and motivation of some of the most eminent scientists in the world In this stimulating collection of conversations scientists in fields as diverse as particle physics and evolutionary biology explore how their backgrounds have shaped their careers and discoveries how being an outsider or an innocent can play an invaluable role in overcoming conventional barriers to new understanding Being a little crazy does seem to help As Nobel laureate for physics Sheldon Glashow says If you would simply take all the kookiest ideas of the early 1970s and put them together you would have made for yourself the theory which is in fact the correct theory of nature so it was like madness These personal explorations with individual scientists are not only accessible and truly fascinating in their insights into the minds of some of the greatest men and women of science but they also provide a strong case that the life and works of our leading scientists are at least as illuminating and interesting as the personalities of the latest literary prizewinners A sequel to *A Passion for Science* this book will delight and intrigue scientists and non scientists alike

Community and Identity in Contemporary Technosciences Karen Kastenhofer, Susan Molyneux-Hodgson, 2021-03-22 This open access edited

book provides new thinking on scientific identity formation. It thoroughly interrogates the concepts of community and identity including both historical and contemporaneous analyses of several scientific fields. Chapters examine whether and how today's scientific identities and communities are subject to fundamental changes reacting to tangible shifts in research funding as well as more intangible transformations in our society's understanding and expectations of technoscience. In so doing, this book reinvigorates the concept of scientific community. Readers will discover empirical analyses of newly emerging fields such as synthetic biology, systems biology, and nanotechnology and accounts of the evolution of theoretical conceptions of scientific identity and community. With inspiring examples of technoscientific identity work and community constellations along with thought-provoking hypotheses and discussion, the work has a broad appeal. Those involved in science governance will benefit particularly from this book, and it has much to offer those in scholarly fields including sociology of science, science studies, philosophy of science, and history of science, as well as teachers of science and scientists themselves. **Curiosity**

and Passion for Science and Art Uwe Bernd Sleytr, 2016. This book describes the accomplishments of a curious and imaginative scientist and his endeavours to translate or even to extrapolate scientific insights into the world of art. The science section in this volume concerns studies on S-layers, a very important class of proteins found on the surface of numerous Bacteria and nearly all Archaea. S-layer proteins are one of the most abundant biopolymers on our planet and assemble into the simplest type of biological membrane. Moreover, they are unique building blocks and patterning elements for the production of complex supramolecular structures and nanoscale devices in nanobiotechnology, molecular nanotechnology, synthetic biology, biomimetics, and nanomedicine. In the second part of this book, the author goes on to passionately describe how his scientific activities stimulated his art work, which in particular concerns the visualization of results and the potential of synthetic biology and evolutionary events induced by genetic manipulations. Most importantly, the engagement in art allowed him to leave the rather curtailed canon of science and reach a mental state of unlimited freedom of thoughts. Mask-like sculptures are used as examples to visualize the intersection between science and art, and in particular, the unpredictability and mystery of scientific visions. Provided by publisher. Scientific Pioneers Joyce Tang, 2006-02-16. This book critically examines the career development of female scientific pioneers. Drawing from existing biographical and ethnographical data, author Joyce Tang analyzes the life and career histories of ten extraordinary female scientists: Marie Curie, Irene Joliot-Curie, Margaret Mead, Barbara McClintock, Maria Goeppert-Heyl, Rachel Carson, Rita Levi-Montalcini, Dorothy Hodgkin, Rosalyn Yalow, and Fay Ajzenberg-Selove. The author explores the personal, political, cultural, and economic factors that led to the success of these women. Scientific Pioneers proposes that for a woman to be successful in science, not only requires perseverance and talent but also structural opportunities, institutional support, and conscious decision-making. Scientific Pioneers is an important addition to the growing literature about women in science, the sociology of science, and the dynamics of discrimination. This analysis of female scientific pioneers is an invaluable resource for both public policy debates
