

A Periodic Table Logic Problem

Purpose: In this activity you will use a set of clues to identify a set of unknown elements in a periodic table. The elements are the elements with atomic numbers 1-20 and 31-36. A letter of the alphabet is used to represent each unknown element. The letter designation is not related to an element's chemical symbol. Each clue refers to a property of an element or a relationship an element has to other elements in the periodic table. Along with logic and knowledge of properties, you will use the periodic trends to solve the puzzle.

Grade: Neatness and completeness count.

Procedure: Use the following trend clues to place the elements in their proper places on the provided periodic table. Try to identify the elements with direct clues first. For example, B is a direct clue because it identifies only one element.
Group 1 Group 2 Group 13 Group 14 Group 15 Group 16 Group 17 Group 18

Emergence Douglas V. Porpora, 2025-11-05 This book takes the relationship between physics and sociology as its subject focusing on the philosophical dispute between emergentism and reductionism It argues that the mystery behind emergence disappears when we abandon the lawful understanding of causality in favor of a powers view Adopting a critical realist perspective it offers a completely novel approach arguing that the mystery associated with emergence is an artifact of the Humean covering law model of causality assumed by both sides of the reductionism and emergentist debate In this debate both reductionists and emergentists have focused on how a single whole or composite relates to its parts and have commonly operated with an understanding of causality in terms of lawful regularities among events As a result emergentists have been left with a dilemma Either admit that laws governing higher level behavior can be explained by lower level laws which is reductionism or leave the existence of the higher level laws a mystery The first book length publication that addresses and attempts to resolve the debate over emergence and reductionism and that gives attention to emergence across the ontological levels from physics to social behavior it will have a lively readership among critical realists It will also be of interest to philosophers of mind philosophers of science social scientists and theoretically oriented practitioners in chemistry biology and psychology
