- The title – what does the word 'dark' suggest literally and metaphorically? Link to the darkness in the extract but also other connotations of darkness.
- The literal meaning of the word 'Relic' and what this could suggest about the character. Link to the content of the extract particularly (as *if* she belonged to another time). 'Louis' is a normal, everyday name (in contrast to the other characters), signifying a recognisable, real-world character common to

protagonists in some fantasy texts. He is the reader's identifiable, sympathetic character.

- The setting, and how it builds atmosphere, linking ideas to the extract: *ancient catacombs, narrow tunnels, back streets of Paris*. Learners may contrast this with the mundane nature of *local supermarket and small apartment*.
- The unanswered questions readers may

have about the events so far: Who is Relic? How did she know Louis's name? Who is The Doorkeeper? What does she mean by the one? Why does she want him to come back to the catacombs the next day? They all point to the mystery genre.

The Role of Letter-Speech Sound Integration in Typical and Atypical Reading Development Jurgen Tijms, Silvia Brem, Gorka Fraga González, Iliana I. Karipidis, 2020-07-24 Fluency is the quintessence of effective reading. To obtain socioeconomic success, fluent reading is of primordial importance and reading is considered a crucial marker of an individual's life course. Approximately 5% of children are affected by developmental dyslexia, exhibiting inaccurate word recognition, spelling

phonological decoding and most importantly severely dysfluent reading which remains as their most characterizing and persistent deficit Unable to attain society's literacy demands individuals with dyslexia are at severe risk for adverse academic economic and psychosocial consequences Recently it has been posed that the development of automatic letter speech sound LSS integration is critical in the acquisition of fluent reading skills and in particular that a failure to develop automatic LSS integration results in an impairment of reading fluency In support neurocognitive research has suggested that the development of automatized processing of LSS associations is an essential step in the formation of a functional neural network for reading Furthermore both neurocognitive and behavioural studies have suggested a less efficient LSS integration in children with dyslexia than in typical readers Finally results from intervention studies have suggested that training LSS might be a promising approach to ameliorate dysfluent reading in children with dyslexia Nonetheless there is still a considerable gap of knowledge in our understanding of the mechanisms by which learning LSS associations relate to dysfluent reading
